This is the Student Solution Manual for Advanced Engineering Mathematics by Alan Jeffrey. The textbook not provided with this purchase provides comprehensive and contemporary coverage of key mathematical ideas, techniques, and their widespread applications for students majoring in engineering, computer science, mathematics, and physics. Using a wide range of examples throughout the book, Jeffrey illustrates how to construct simple mathematical models, how to apply mathematical reasoning to select a particular solution from a range of possible alternatives, and how to determine which solution has physical significance. Jeffrey includes material that is not found in works of a similar nature, such as the use of the matrix exponential when solving systems of ordinary differential equations. The text provides many detailed worked examples following the introduction of each new idea, and large problem sets provide both routine practice and, in many cases, greater challenge and insight for students. Most chapters end with a set of computer projects that require the use of any CAS such as Maple or Mathematica that reinforce ideas and provide insight into more advanced problems.
