Embodiments of Will Michael Frampton, 2008 This book examines the two chief anatomical and physiological embodiment theories of voluntary animal motion which I call the cardiosinew and cerebroneuromuscular theories of motion from the time of Aristotle 384 322 B C to that of Mondino d A D 1326 The study of animal motion commenced with the ancient Greek natural scientist Aristotle who wrote the monograph On the motion of animals *De motu animalium* Subsequent inquiries into voluntary animal motion may be found in a variety of Greek Latin and Arabic compendia commentaries and encyclopedias throughout the ancient and medieval periods The motion of animals was considered relevant to natural philosophers and theologians investigating the nature of the soul and to physicians seeking to discover the causes of disorders of voluntary movement such as epilepsy and tetany The book fills a gap in the scholarly literature concerned with pre modern studies of the anatomical and physiological mechanisms of will and bodily movement The accompanying photographs of my own anatomical dissections illuminate ancient and medieval conceptual empirical and experimental methods of anatomical and physiological research
