

Lymph Flow

Path of Lymph Flow through a Lymph Node

-  1 **Afferent lymphatics** (afferens, to bring to) carry lymph to the lymph node from peripheral tissues. The afferent lymphatics penetrate the capsule of the lymph node on the side opposite the hilum.
- 2 The afferent vessels deliver lymph to the subcapsular space, a meshwork of reticular fibers, macrophages, and dendritic cells. **Dendritic cells** are involved in the initiation of the immune response.
- 3 Lymph next flows into the **outer cortex**, which contains B cells within germinal centers that resemble those of lymphoid nodules.
- 4 Lymph then flows through lymph sinuses in the **deep cortex**, which is dominated by T cells.
- 5 Lymph continues into the **medullary sinus** at the core of the lymph node. This region contains B cells and plasma cells.
- 6 **Efferent lymphatics** (efferens, to bring out) leave the lymph node at the hilum. These vessels collect lymph from the medullary sinus and carry it toward the venous circulation.
