It is estimated that more than 40 million people are blind and more than 550 million people suffer from mild to severe visual impairment by 2020. In addition, at least one billion people worldwide suffer from visual impairment, most of which could have been prevented. The World Health Organization reports that the top causes of blindness and vision loss include cataract, uncorrected ametropia, glaucoma, age-related macular disease, diabetes retinopathy, etc. As people's lifestyles change, the disease spectrum is evolving across the globe, and responses and strategies need to change in time. Efforts to reduce the prevalence, incidence, and progression of eye diseases could have a profound impact on public health. The aim of the current Research Topic is to focus on recent and novel research trends in ocular diseases: glaucoma, diabetic retinopathy, myopia, etc., and visual impairment, especially preventive strategies to avoid a younger age of ocular diseases onset and vision loss.
