**The Age of Low Tech** Philippe Bihouix, 2020-10-21 People often believe that we can overcome the profound environmental and climate crises we face by smart systems green innovations and more recycling However the quest for complex technological solutions which rely on increasingly exotic and scarce materials makes this unlikely A best seller in France this English language edition introduces readers to an alternative perspective on how we should be marshalling our resources to preserve the planet and secure our future Bihouix skilfully goes against the grain to argue that high technology will not solve global problems and envisages a different approach to build a more resilient and sustainable society *The French Left* Arthur Hirsh, 1982 **Contemporary French Civilization**, 1978 **Magical Marxism** Andy Merrifield, 2011-02-04 Shortlisted for the Bread and Roses Prize 2012 Andy Merrifield breathes new life into the Marxist tradition Magical Marxism demands something more of orthodox Marxism something more interesting and liberating It asks that we imagine a Marxism that moves beyond debates about class the role of the state and the dictatorship of the proletariat In escaping the formalist straitjacket of typical Marxist critique Merrifield argues for a reconsideration of Marxism and its potential applying previously unexplored approaches to Marxist thinking that will reveal vital new modes of political activism and debate This book will provoke and inspire in equal measure It gives us a Marxism for the 21st century which offers dramatic new possibilities for political engagement **U.N. Conference to Review and Appraise the U.N. Decade for Women, July 15-26, 1985**, 1986 **Alternative Ways of Life in Contemporary Europe** Andrzej Siciński, Monica Wemegah, 1983 references throughout part of the Goals processes and indicators of development project **Factor Five** Ernst Ulrich von Weizsacker, Charlie Hargroves, Michael H. Smith, Cheryl Desha, Peter Stasinopoulos, 2009-12-01 When first published in 1997 Factor Four Doubling Wealth Halving Resource Use by renowned economic and engineering experts Ernst von Weizsacker Amory Lovins and L Hunter Lovins transformed how economists policy makers engineers entrepreneurs and business leaders thought about innovation and wealth creation Through examples from a wide range of industrial sectors the authors demonstrated how technical innovation could cut resource use in half while doubling wealth Now twelve years on with climate change at the top of the world agenda and the new economic giants of China and India needing ever more resources there is a unique historic opportunity to scale up resources productivity and radically transform the global economy And Factor Five is the book set to change all of this Picking up where Factor Four left off this new book examines the past 15 years of innovation in industry technical innovation and policy It shows how and where factor four gains have been made and how we can achieve greater factor five or 80% improvements in resource and energy productivity and how to roll them out on a global scale to retool our economic system massively boost wealth for billions of people around the world and help solve the climate change crises Spanning dozens of countries including China and India and examining innumerable cases of innovation in design technology and policy the authors leave no engineering and economic stone unturned in their

quest for excellence The book tackles sustainable development and climate change by providing in depth Factor 5 resource productivity studies of the following sectors Buildings Industry Agriculture Food and Hospitality and Transportation In its systematic approach to demonstrating how Factor 5 can be achieved the book also provides an overview of energy water nexus and energy materials nexus efficiency opportunities across these sectors Given that these sectors are responsible for virtually all energy usage and greenhouse gas emissions globally this book is designed to guide everyone from individual households businesses industry sector groups to national governments in their efforts to achieve the IPCC recommended target of 80 per cent reductions to greenhouse gas emissions It also looks at innovation in regulation to increase resource productivity pricing carbon trading eco taxation and permits and the role of international institutions and trade The authors also explain exciting new concepts such as bio mimicry and whole system design as hallmarks for a new generation of technologies The last part of the book explores transformative ideas such as a long term trajectory of gently rising energy and resource prices and new concepts of well being in a more equitable world Like its predecessor this book is simply the most important work on the future of innovation business economics and policy and is top drawer reading for leaders across all sectors including business and industry government engineering and design and teaching This book is full colour throughout Published with The Natural Edge Project

**Progress as If Survival Mattered** Hugh Nash,1981 **Modern France** Malcolm Cook,Grace Davie,2002-01-04 Modern France is an up to date and accessible introduction to the nature of French society at the end of the twentieth century The book examines the transition of France and French life as the nation moves from an industrial to a post industrial economy and the cultural and social dislocations that such an evolution implies Sociological concepts and categories of class race gender age and region are discussed as well as how they combine together to produce inequalities and identities These concepts are then applied to a range of issues such as work politics education health religion and leisure Modern France reveals the nature of French society at a critical moment in her evolution and how a member of the European Union reflects distinctiveness and commonality in the development of Europe as a whole

*Satisfaire nos besoins : un choix de société !* Jean-Christophe Giuliani,2020-01-03T00:00:00Z Le développement économique nous a permis d'atteindre un niveau de confort matériel sans précédent dans l'histoire de l'humanité Malgré ce bien-être matériel nous continuons produire et consommer toujours plus de biens et de services marchands La surproduction et la surconsommation menacent désormais notre qualité de vie notre processus démocratique et la survie des générations présentes et venir L'imminence d'un effondrement qui est révélée par la fréquence et l'intensité des phénomènes météorologiques extrêmes des inondations des sécheresses des pics de pollution etc nous impose de changer de mode de vie et de modèle de développement en moins de 10 ans Pour être envisageables ces changements devront nous procurer une vision de l'avenir viable atteignable et désirable Notre mode de vie nos valeurs notre représentation de l'existence et l'ordre social sont en partie déterminés par notre rapport au temps et les moyens que nous utilisons pour satisfaire nos besoins Le changement sera donc

sirable s'il est en mesure de nous procurer les moyens temporels de nous socialiser de définir notre identité de structurer le rythme de notre existence et de satisfaire nos besoins d'appartenance d'estime et de réalisation autrement que par l'activité professionnelle et la consommation L'objectif de cet ouvrage est de montrer que le choix du rapport au temps et des moyens utilisés pour satisfaire nos besoins n'est pas un choix économique mais un choix de société dont dépend la survie et l'avenir de l'humanité
