algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems. The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions. Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers. This book provides an in depth description of different methodologies and techniques currently used in farm level modelling. While giving an overview of the theoretical grounding behind the models, an applied approach is also used. Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply. This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models. Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic, social and environmental goals required to achieve the aims of multidimensional policy.

Low Carbon Transition in Emerging Economies Erkin Erdoğan, 2023-09-15 Many emerging economies are on the front line of the devastating impacts of global warming such as desertification and extreme weather events but for historical and political reasons they follow ambitious growth targets with seemingly little concern for climate change and environmental degradation Focusing on the case of Turkey this book investigates the economic impacts of possible climate change policies to help meet the required mitigation targets and transition to a low carbon economy In order to reach net zero targets by 2050 in compliance with the Paris Agreement Turkey must introduce policies that promote low carbon investments green jobs and low carbon employment more broadly This book explores the empirical evidence on the effectiveness of a carbon pricing mechanism by developing an econometric vector autoregression VAR model to analyse key data sets This time series analysis provides insights on a macro level dealing with aggregate data in which the role and complexity of micro interferences disappear allowing for the discovery of patterns and changes over time Thus the book contributes to the literature on methodology by arguing that time series analysis is one of the best fitting approaches to estimate possible impacts of climate change policies on an economy Additionally the results of the model are compared and contrasted with similar data from other emerging economies to identify potential common policy solutions between countries at a similar stage of development This book is vital reading for researchers interested in climate policy the economics of climate change and environmental economics
