Development With Python & Machine Learning By Wearable & Wireless Systems For Movement Disorder

Treatment Via Deep Brain Stimulation Robert Lemoyne, Timothy Mastroianni, 2021-08-26 The book presents the confluence of wearable and wireless inertial sensor systems such as a smartphone for deep brain stimulation for treating movement disorders such as essential tremor and machine learning The machine learning distinguishes between distinct deep brain stimulation settings such as On and Off status This achievement demonstrates preliminary insight with respect to

the concept of Network Centric Therapy which essentially represents the Internet of Things for healthcare and the biomedical industry inclusive of wearable and wireless inertial sensor systems machine learning and access to Cloud computing resources Imperative to the realization of these objectives is the organization of the software development process Requirements and pseudo code are derived and software automation using Python for post processing the inertial sensor signal data to a feature set for machine learning is progressively developed A perspective of machine learning in terms of a conceptual basis and operational overview is provided Subsequently an assortment of machine learning algorithms is evaluated based on quantification of a reach and grasp task for essential tremor using a smartphone as a wearable and wireless accelerometer system Furthermore these skills regarding the software development process and machine learning applications with wearable and wireless inertial sensor systems enable new and novel biomedical research only bounded by the reader s creativity Related Link s

Biology for Nonbiologists Frank R.
