

GENERAL LUBRICATIONS

Lubricate every 1 000 km (600 miles, 6 months).

Proper lubrication is important for smooth operation and long life of each working part of the vehicle. Major lubrication points are indicated below.

CAUTION

Do not use too much grease on the brake call shaft. If grease gets on the brake, brake clearance will result.

- | | |
|----------------------------------|-------------------------------|
| 1. Steering knuckle | 8. Rear axle |
| 2. Suspension case | 9. Front wheel bearing |
| 3. Chain case | 10. Rear wheel nut and flange |
| 4. Side drive linkage and roller | 11. Flywheel and pinion gear |
| 5. Thrust roller and nut | 12. Drive shaft pinion gear |
| 6. Hub nut | 13. Hub nut |
| 7. Thrust roller | 14. New chainring |

NOTE

- Before adjusting each part, remove any rust and wipe off any grease oil, dirt or grime.
- Lubricate exposed parts which are subject to rust with a rust preventative spray, especially whenever the vehicle has been operated under wet or rainy conditions.

COMPRESSION PRESSURE CHECK

The compression pressure reading of a cylinder is a good indicator of its internal condition. The degree to which the cylinder is worn based on the results of a compression test. Periodic engine service records kept at your facility should include compression readings for each maintenance service.

COMPRESSION PRESSURE SPECIFICATION

Barrel	Crank
1 000 ~ 1 050 kPa (75 ~ 78 kg/cm ²) (109 ~ 106 psi)	800 kPa (6 kg/cm ²) (116 psi)

Low compression pressure can indicate any of the following conditions:

- Excessively worn cylinder walls
- Worn piston or piston rings
- Piston rings stuck in grooves
- Open valve seating
- Damage or otherwise defective cylinder head gasket

NOTE

When the compression pressure goes below specification, check the engine for conditions listed above.

COMPRESSION TEST PROCEDURE

NOTE

- Before testing the engine for compression pressure, make sure that the cylinder head nuts are tightened to the specified torque values and the valves are properly adjusted.
- Warm up the engine before testing.
- Make sure that the battery is fully charged.

Remove the spark plug and test the compression pressure in the following manner:

- Remove the spark plug.
- Install the compression gauge and adapter in the spark plug hole. Make sure that the connection is tight.
- Keep the throttle lever in the fully opened position.
- Press the starter button and crank the engine for a few seconds. Record the maximum gauge reading at the various compression.
