Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i.e. social cognition from a detached observer's point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i.e. social cognition from a participant's point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of

at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context. Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms. Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds. For this Research Topic we therefore solicit reviews, original research articles, opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so. While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies, psychophysiological investigations, methodological innovations, computational approaches, developmental and patient studies. By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social. *ECRM2012-Proceedings of the 11th European Conference on Research Methods* Rachel McClean, 2012-01-01. Conceptual Structures: From Information to Intelligence Madalina Croitoru, Sébastien Ferré, Dickson Lukose, 2010-07-30. The 18th International Conference on Conceptual Structures ICCS 2010 was the latest in a series of annual conferences that have been held in Europe, Australia and North America since 1993. The focus of the conference has been the representation and analysis of conceptual knowledge for research and practical application. ICCS brings together researchers and practitioners in information and computer sciences as well as social science to explore novel ways that conceptual structures can be deployed. Arising from the research on knowledge representation and reasoning with conceptual graphs over the years, ICCS has broadened its scope to include innovations from a wider range of theories and related practices among them other forms of graph-based reasoning systems like RDF or existential graphs, formal concept analysis, Semantic Web technologies, ontologies, concept mapping and more. Accordingly, ICCS represents a family of approaches related to conceptual structures that build on the successes with techniques derived from artificial intelligence, knowledge representation and reasoning, applied mathematics.

and lattice theory computational linguistics conceptual modeling and design d grammatic reasoning and logic intelligent systems and knowledge management The ICCS 2010 theme From Information to Intelligence hints at unveiling the reasoning capabilities of conceptual structures Indeed improvements in storage capacity and performance of computing infrastructure have also affected the nature of knowledge representation and reasoning KRR systems shifting their focus toward representational power and execution performance Therefore KRR research is now faced with a challenge of developing knowledge representation and reasoning structures optimized for such reasonings [Krishna's Professional Communication](#)

Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

New Perspectives on Corporate Social Responsibility Linda O'Riordan, Piotr Zmuda, Stefan Heinemann, 2015-04-14

Providing a timely contribution to the ongoing questions surrounding topics which are by definition subject to varying stakeholder interpretations, this book addresses the missing link between theoretical CSR concepts and everyday management practice. It acts as a guide to awaken managers to the advantages of adopting a CSR mindset when developing sustainable business strategies. The book consists of three parts: 1. A theoretical realm which establishes the key concepts and rationale for the adoption of a sustainable CSR approach; 2. A practical realm which addresses putting CSR and sustainability into business practice; 3. An educational realm which proposes how to incorporate the concepts into teaching and training.

Multimodal Perspectives of Language, Literacy, and Learning in Early Childhood Marilyn J. Narey, 2017-01-03. Our image-rich media-dominated culture prompts critical thinking about how we educate young children. In response, this volume provides a rich and provocative synthesis of theory, research, and practice that pushes beyond monomodal constructs of teaching and learning. It is a book about bringing sense to 21st-century early childhood education with sense as related to modalities: sight, hearing, and sense in terms of making meaning. It reveals how multimodal perspectives emphasize the creative transformative process of learning by broadening the modes for understanding and by encouraging critical analysis, problem solving, and decision making. The volume's explicit focus on children's visual texts and art facilitates understanding of multimodal approaches to language literacy and learning. Authentic examples feature diverse contexts including classrooms, homes, museums, and intergenerational spaces and illustrate children's sense-making of life experiences such as birth, identity, environmental phenomena, immigration, social justice, and homelessness. This timely book provokes readers to examine understandings of language literacy and learning through a multimodal lens, provides a starting point for constructing broader multimodal views of what it might mean to make meaning, and underscores the production and interpretation of visual texts as meaning-making processes that are especially critical to early childhood education in the 21st century.
