Kernighan, 2017-01-24 The basics of how computer hardware software and systems work and the risks they create for our privacy and security Computers are everywhere Some of them are highly visible in laptops tablets cell phones and smart watches But most are invisible like those in appliances cars medical equipment transportation systems power grids and weapons We never see the myriad computers that quietly collect share and sometimes leak vast amounts of personal data about us Through computers governments and companies increasingly monitor what we do Social networks and advertisers know far more about us than we should be comfortable with using information we freely give them Criminals have all too easy access to our data Do we truly understand the power of computers in our world Understanding the Digital World explains how computer hardware software networks and systems work Topics include how computers are built and how they compute what programming is and why it is difficult how the Internet and the web operate and how all of these affect our security privacy property and other important social political and economic issues This book also touches on fundamental ideas from computer science and some of the inherent limitations of computers It includes numerous color illustrations notes on sources for further exploration and a glossary to explain technical terms and buzzwords Understanding the Digital World is a must read for all who want to know more about computers and communications It explains precisely and carefully not only how they operate but also how they influence our daily lives in terms anyone can understand no matter what their experience and knowledge of technology

Operating Systems William Stallings, 2009 For a one semester undergraduate course in operating systems for computer science computer engineering and electrical engineering majors Winner of the 2009 Textbook Excellence Award from the Text and Academic Authors Association TAA Operating Systems Internals and Design Principles is a comprehensive and unified introduction to operating systems By using several innovative

tools Stallings makes it possible to understand critical core concepts that can be fundamentally challenging The new edition includes the implementation of web based animations to aid visual learners At key points in the book students are directed to view an animation and then are provided with assignments to alter the animation input and analyze the results The concepts are then enhanced and supported by end of chapter case studies of UNIX Linux and Windows Vista These provide students with a solid understanding of the key mechanisms of modern operating systems and the types of design tradeoffs and decisions involved in OS design Because they are embedded into the text as end of chapter material students are able to apply them right at the point of discussion This approach is equally useful as a basic reference and as an up to date survey of the state of the art *Resources in Education*, 1975 Integration of Natural Language and Vision Processing Paul Mc Kevitt, 1996-06-30 Although there has been much progress in developing theories models and systems in the areas of Natural Language Processing NLP and Vision Processing VP there has heretofore been little progress on integrating these two subareas of Artificial Intelligence AI This book contains a set of edited papers addressing theoretical issues and the grounding of representations in NLP and VP from philosophical and psychological points of view The papers focus on site descriptions such as the reasoning work on space at Leeds UK the systems work of the ILS Illinois U S A and philosophical work on grounding at Torino Italy on Schank s earlier work on pragmatics and meaning incorporated into hypermedia teaching systems Wilks visions on metaphor on experimental data for how people fuse language and vision and theories and computational models mainly connectionist for tackling Searle s Chinese Room Problem and Harnad s Symbol Grounding Problem The Irish Room is introduced as a mechanism through which integration solves the Chinese Room The U S A China and the EU are well reflected showing the fact that integration is a truly international issue There is no doubt that all of this will be necessary for the SuperInformationHighways of the future *Intelligent Decision Technologies 2017* Ireneusz Czarnowski, Robert J. Howlett, Lakhmi C. Jain, 2017-05-24 The volume presents a collection of peer reviewed articles from the 9th KES International Conference on Intelligent Decision Technologies KES IDT 17 held in Vilamoura Algarve Portugal on 21 23 June 2017 The conference addressed critical areas of computer science as well as promoting knowledge transfer and the generation of new ideas in the field of intelligent decision making project management and data analysis The range of topics addressed includes methods of classification prediction data analysis decision support modeling social media and many more in such diverse areas as finance linguistics management and transportation Intelligent Help Systems for UNIX Stephen J. Hegner, Paul Mc Kevitt, Peter Norvig, Robert L. Wilensky, 2012-12-06 In this international collection of papers there is a wealth of knowledge on artificial intelligence AI and cognitive science CS techniques applied to the problem of providing help systems mainly for the UNIX operating system The research described here involves the representation of technical computer concepts but also the representation of how users conceptualise such concepts The collection looks at computational models and systems such as UC Yucca and OSCON programmed in languages such as Lisp Prolog OPS 5 and

C which have been developed to provide UNIX help These systems range from being menu based to ones with natural language interfaces some providing active help intervening when they believe the user to have misconceptions and some based on empirical studies of what users actually do while using UNIX Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do and figuring out a way to do it as well as representing the knowledge needed to do so There is a significant focus on natural language dialogue where consultation systems can become active incorporating user modelling natural language generation and plan recognition modelling metaphors and users mistaken beliefs Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test bed domain such as help on UNIX
