Cardiovascular risk factors contribute to the development of cardiovascular disease from early life It is thus crucial to
implement preventive strategies addressing the burden of cardiovascular disease as early as possible A multidisciplinary
approach to the risk estimation and prevention of vascular events should be adopted at each level of health care starting
from the setting of perinatology Recent decades have been marked with major advances in this field with the emergence of a
variety of new inflammatory and immune mediated markers of heightened cardiovascular risk in particular The current book
reflects some of the emerging concepts in cardiovascular pathophysiology and the shifting paradigm of cardiovascular risk
estimation It comprehensively covers primary and secondary preventive measures targeted at different age and gender
groups Attention is paid to inflammatory and metabolic markers of vascular damage and to the assessment of vascular
function by noninvasive standardized ultrasound techniques This is a must read book for all health professionals and
researchers tackling the issue of cardiovascular burden at individual and community level It can also serve as a didactic
source for postgraduate medical students
