Computer Algebra R. Albrecht,B. Buchberger,G.E. Collins,R. Loos,2013-06-29 The journal Computing has established a series of supplement volumes the fourth of which appears this year Its purpose is to provide a coherent presentation of a new topic in a single volume The previous subjects were Computer Arithmetic 1977 Fundamentals of Numerical Computation 1980 and Parallel Processes and Related Automata 1981 the topic of this 1982 Supplementum to Computing is Computer Algebra This subject which emerged in the early nineteen sixties has also been referred to as

symbolic and algebraic computation or formula manipulation Algebraic algorithms have been receiving increasing interest as a result of the recognition of the central role of algorithms in computer science They can be easily specified in a formal and rigorous way and provide solutions to problems known and studied for a long time Whereas traditional algebra is concerned with constructive methods computer algebra is furthermore interested in efficiency in implementation and in hardware and software aspects of the algorithms It develops that in deciding effectiveness and determining efficiency of algebraic methods many other tools recursion theory logic analysis and combinatorics for example are necessary In the beginning of the use of computers for symbolic algebra it soon became apparent that the straightforward textbook methods were often very inefficient Instead of turning to numerical approximation methods computer algebra studies systematically the sources of the inefficiency and searches for alternative algebraic methods to improve or even replace the algorithms

Computer Simulation Using Particles R.W Hockney,J.W Eastwood,2021-03-24 Computer simulation of systems has become an important tool in scientific research and engineering design including the simulation of systems through the motion of their constituent particles Important examples of this are the motion of stars in galaxies ions in hot gas plasmas electrons in semiconductor devices and atoms in solids and liquids The behavior of the system is studied by programming into the computer a model of the system and then performing experiments with this model New scientific insight is obtained by observing such computer experiments often for controlled conditions that are not accessible in the laboratory Computer Simulation using Particles deals with the simulation of systems by following the motion of their constituent particles This book provides an introduction to simulation using particles based on the NGP CIC and P3M algorithms and the programming principles that assist with the preparations of large simulation programs based on the OLYMPUS methodology It also includes case study examples in the fields of astrophysics plasmas semiconductors and ionic solids as well as more detailed mathematical treatment of the models such as their errors dispersion and optimization This resource will help you understand how engineering design can be assisted by the ability to predict performance using the computer model before embarking on costly and time consuming manufacture

Algorithms in Decision Support Systems Vicente García-Díaz,2021-03-19 This book aims to provide a new vision of how algorithms are the core of decision support systems DSSs which are increasingly important information systems that help to make decisions related to unstructured and semi unstructured decision problems that do not have a simple solution from a human point of view It begins with a discussion of how DSSs will be vital to improving the health of the population The following article deals with how DSSs can be applied to improve the performance of people doing a specific task like playing tennis It continues with a work in which authors apply DSSs to insect pest management together with an interactive platform for fitting data and carrying out spatial visualization The next article improves how to reschedule trains whenever disturbances occur together with an evaluation framework The final works focus on different relevant areas of DSSs 1 a comparison of ensemble and dimensionality reduction models based on an entropy criterion 2 a radar emitter identification method based on semi supervised and transfer learning 3 design limitations errors and hazards in creating very large scale DSSs and 4 efficient rule generation for associative classification We hope you enjoy all the contents in the book
