The Digestive Process

The digestive system

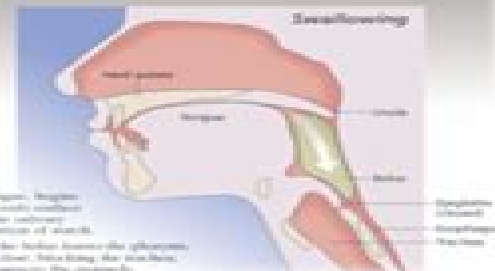

The digestive system, or gastrointestinal tract, is essentially a muscular tube in which most digestion, absorption of nutrients, and elimination takes place. Food enters the mouth, usually in the mouth, is propelled through a series of different accessory and absorptive components. Within these components, food is digested (broken down) by digestive enzymes and components must interact to be absorbed. The digestive system also stores undigested components until they are ready to be expelled at the end of the gastrointestinal tract.

Ingestion

Chewing & swallowing

Chewing, the mechanical action of the mouth and tongue, begins the breakdown of solid food. This greatly increases food's surface area and exposes the food's nutrients to enzymes of the salivary glands. Saliva softens the food and begins the digestion of starch. The mixture of food and saliva is called a *bolus*. In the bolus, the pharynx, the esophagus, a flap-like valve, and the vocal cord contract, forcing the bolus forward, where it moves into the esophagus for the stomach.

Peristaltic action

Material is moved through the digestive system by a series of smooth muscle contractions called peristalsis. The muscle is relaxed in the material contents, while the muscle ahead contracts, forcing the material into the next section.

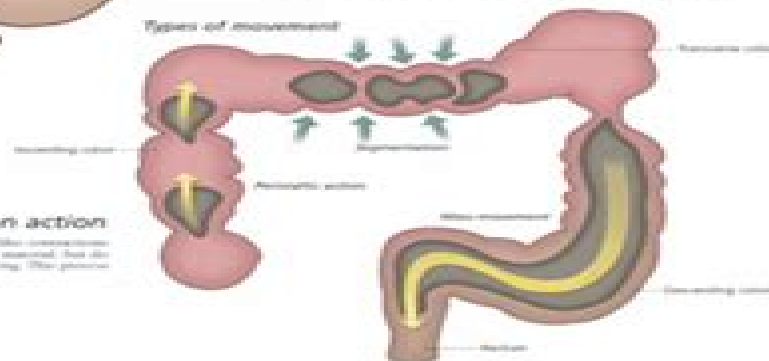

In the esophagus, material moves through the large intestine, where and absorption are affected (absorption). This movement is called peristalsis.

Colonic movement

Movement through the large intestine is accomplished through the contractions of the longitudinal and circular muscles. Types of movement include peristaltic action, segmental action, and mass movement. Movement of food through the large intestine is slower than through the small intestine, allowing for reabsorption of water.

Types of movement

Segmentation action

In regular intervals, ring-like contractions (chase) and relax the water material, then the water is absorbed. This process is called segmentation.

Bile enters the small intestine and helps to break down fats into smaller particles. Pancreatic juice contains enzymes that digest proteins, breaking down food, proteins and carbohydrates.

Anatomy And Physiology Digestive System:

Gastrointestinal Anatomy and Physiology John F. Reinus, Douglas Simon, 2014-03-04 Gastroenterologists require detailed knowledge regarding the anatomy of the GI system in order to understand the disturbances caused by diseases they diagnose and treat. **Gastrointestinal Anatomy and Physiology** will bring together the world's leading names to present a comprehensive overview of the anatomical and physiological features of the gastrointestinal tract. Full colour and with excellent anatomical and clinical figures throughout, it will provide succinct, authoritative and didactic anatomic and physiologic information on all the key areas including GI motility, hepatic structure, GI hormones, gastric secretion and absorption of nutrients. GI trainees will enjoy the self-assessment MCQs written to the level they will encounter during their Board exams and the seasoned gastroenterologist will value it as a handy reference book and refresher for re-certification exams.

Food Digestion and Absorption C Anandharamakrishnan, Jeyan Arthur Moses, S Priyanka, 2023-11-29 Focusing on the complexity of the food digestion process from oral cavity to intestine, this book looks at the anatomical intricacies of the digestive system, techniques currently used to study food digestibility, the glycemic index and bioavailability of food components. It also provides a detailed understanding of various modification techniques critical to any food product development, such as modification of food structure, its composition and size. Being the first of its kind to provide an in-depth idea of various stages of food digestion whilst linking it with approaches in modifying foods so as to cater to specific food or functional requirements, the book provides an integrated approach. Existing methods to understand the process of food digestion and advances in artificial systems that have been used for such studies are presented, substantiated with findings from scientific publications. Apart from readers from the field of medicine, this book is highly interdisciplinary and will attract readers from food science, nutrition and food physics.

The Digestive System Ian Peate, 2025-03-10 A concise, illustrated and accessible guide to the digestive system. Each of the twelve volumes in Peate's Body Systems series is rooted in the belief that a deep and thorough understanding of the human body is essential for providing the highest standard of care. Offering clear, accessible and up-to-date information on different body systems, this series bridges the gap between complex scientific concepts and practical everyday applications in health and care settings. This series makes for an invaluable resource for those committed to understanding the intricacies of human biology, physiology and the various systems that sustain life. **The Digestive System** is the perfect companion for students and newly registered practitioners across nursing and allied health fields with an interest in gastrointestinal care, providing a comprehensive yet easy-to-digest guide for both academic and clinical application. Equips healthcare students and practitioners with the necessary information to provide safe and competent care. Features colourful illustrations to aid comprehension, clarify complicated concepts and render content more engaging and accessible. Empowers readers to adapt to a rapidly evolving healthcare landscape, preparing them for the future of healthcare delivery. Contains information necessary for effective patient care of those with peptic ulcers, inflammatory

bowel disease and other gastrointestinal diseases and conditions
