Anatomy Of The Human Heart Model:

Functional Imaging and Modeling of the Heart Alejandro F. Frangi, Petia I. Radeva, Andres Santos, Monica Hernandez, 2005-06-13 The 1st and 2nd International Conferences on Functional Imaging and Modelling of the Heart FIMH were held in Helsinki Finland in November 2001 and in Lyon France in June 2003 These meetings were born through a fruitful scientific collaboration between France and Finland that outreached to other groups and led to the start of this biennial event The FIMH conference was the first attempt to agglutinate researchers from several complementary but often isolated fields cardiac imaging signal and image processing applied mathematics and physics biomedical engineering and computer science cardiology radiology biology and physiology In the first two editions the conference received an enthusiastic acceptance by experts of all these communities FIMH was originally started as a European event and has increasingly attracted more and more people from the US and Asia This edition of FIMH received the largest number of submissions so far with a result of 47 papers being accepted as either oral presentations or posters There were a number of submissions from non EU institutions which confirms the growing interest in this series of meetings All papers were reviewed by up to four reviewers The accepted contributions were organized into 8 oral sessions and 3 poster sessions complemented by a number of invited talks This year we tried to allocate as many papers as possible as oral presentations to facilitate more active participation and to stimulate multidisciplinary discussions

Life System Modeling and Intelligent Computing Kang Li, Xin Li, Shiwei Ma, George W. Irwin, 2010-09-03 The 2010 International Conference on Life System Modeling and Simulation LSMS 2010 and the 2010 International Conference on Intelligent Computing for Sustainable Energy and Environment ICSEE 2010 were formed to bring together researchers and practitioners in the fields of life system modeling simulation and intelligent computing applied to worldwide sustainable energy and environmental applications A life system is a broad concept covering both micro and macro components ranging from cells tissues and organs across to organisms and ecological niches To comprehend and predict the complex behavior of even a simple life system can be tremendously difficult using conventional approaches To meet this challenge a variety of new theories and methodologies have emerged in recent years on life system modeling and simulation Along with improved understanding of the behavior of biological systems novel intelligent computing paradigms and techniques have emerged to handle complicated real world problems and applications In particular intelligent computing approaches have been valuable in the design and development of systems and facilities for achieving sustainable energy and a sustainable environment the two most challenging issues currently facing humanity The two LSMS 2010 and ICSEE 2010 conferences

served as an important platform for synergizing these two research streams *Collateral Circulation of the Heart* Christian Seiler, 2009-06-12 The sober explanation for this book is a call by the Springer Verlag London to edit a publication on The functional relevance of the collateral circulation of the heart Alternatively it could be sold as the result of my intention to reduce entropy of 18 years of scientific work on the topic of the coronary circulation which was itself meant to diminish the amount of useless energy Such a process of reducing disarray in a system with the aim of grasping it better is related to simplification which carries the risk of introducing error This can be exemplified by the historic view of angina pectoris which used to be simplified as being always fatal thus obscuring for nearly two centuries the view of a self healing mechanism such as the collateral circulation of the heart It would be na ve to assume the present work to be free of erroneous oversimplification because the very nature of scientific work is related to generating simple hypotheses with their subsequent falsification In that context and bluntly my primary interest in the field of the collateral circulation was not initiated with a vision of eradicating the consequences of coronary artery disease CAD by promoting the growth of natural bypasses The time for such sizeable ideas had passed in the 1970s with the start of the work by Wolfgang Schaper
