Thinking about Life Paul S. Agutter, Denys N. Wheatley, 2008-11-05 Our previous book *About Life* concerned modern biology We used our present day understanding of cells to define the living state providing a basis for exploring several general interest topics the origin of life extraterrestrial life intelligence and the possibility that humans are unique The ideas we proposed in *About Life* were intended as starting points for debate we did not claim them as truth but the information on which they were based is currently accepted as scientific fact What does that mean What is scientific fact and why is it accepted What is science and is biology like other sciences such as physics except in subject matter The book you are now reading investigates these questions and some related ones Like *About Life* it may particularly interest a reader who wishes to change career to biology and its related subdisciplines In line with a recommendation by the British Association for the Advancement of Science that the public should be given fuller information about the nature of science we present the concepts underpinning biology and a survey of its historical and philosophical basis

The Genesis of the Second Scientific Revolution Rinat M. Nugayev, 2025-04-29 The present book elicits the reasons for the second scientific revolution According to Chapter 1 one has to abandon the great genius approach in favor of mundane Heidegger's existential analytic with *Dasein* as a way of life shared by the members of scientific community Scientific revolutions should be considered as clashes of diverse mathematical projections of nature consisting of bundles of practices In Chapter 2 it is revealed that Quantum and the Relativistic revolutions had a common origin a skirmish between the Newtonian mechanics Maxwellian electrodynamics Boltzmann's statistical mechanics and Thomson's thermodynamics The skirmish was disclosed by Planck who stressed that the paradigms must be modified to remain compatible Planck took the first step while Einstein took the next ones owing to

Bechler,2012-12-06 Three events which happened all within the same week some ten years ago set me on the track which the book describes The first was a reading of Emile Meyerson works in the course of a prolonged research on Einstein s relativity theory which sent me back to Meyerson s Identity and Reality where I read and reread the striking chapter on Irrationality In my earlier researches into the origins of French Conventionism I came to know similar views all apparently deriving from Emile Boutroux s doctoral thesis of 1874 De la contingence des lois de la nature and his notes of the 1892-3 course he taught at the Sorbonne De l'idée de loi naturelle dans la science et la philosophie contemporaines But never before was the full effect of the argument so suddenly clear as when I read Meyerson On the same week I read by sheer accident Ernest Moody s two parts paper in the JHI of 1951 Galileo and Avempace Put near Meyerson s thesis what Moody argued was a striking confirmation it was the sheer irrationality of the Platonic tradition leading from Avempace to Galileo which was the working conceptual force behind the notion of a non appearing nature active all the time but always submerged as it is embodied in the concept of void and motion in it
