Theoretical and Computational Fluid Mechanics Terry E. Moschandreou, Keith Afas, Khoa Nguyen, Konstantinos Kyritsis, 2025-12-24 *Theoretical and Computational Fluid Mechanics Existence Blowup and Discrete Exterior Calculus Problems Volume II* is self contained though it builds upon the work of the previous volume in providing a comprehensive introduction to the mathematical theory of incompressible flows with a focus on the foundational structures analytical techniques and open problems associated with the Navier Stokes equations In this volume emphasis is placed on the interplay between geometry functional analysis and partial differential equations that underpins much of modern fluid theory As a reference or teaching supplement the book is accessible to anyone with a basic level of understanding of fluid dynamics and yet still engaging for those of a deeper understanding The book is aimed at theorists and applied mathematicians from a wide range of scientific fields including the social health and physical sciences It provides a step by step guide to the construction of solutions of both elementary and open problems of viscous and non viscous models and for the applications of such models for the functional analysis and real analysis of data Features Offers a self contained treatment that does not require a previous background in fluid dynamics Suitable as a reference text for graduate students researchers and professionals and could easily be used as a teaching resource Provides various examples using Maple Mathematica and to a lesser extent MATLAB programming languages
