The Numerical Solution of Systems of Polynomials Arising in Engineering and Science Andrew John Sommese, Charles Weldon Wampler (II.), 2005 Written by the founders of the new and expanding field of numerical algebraic geometry this is the first book that uses an algebraic geometric approach to the numerical solution of polynomial systems and also the first one to treat numerical methods for finding positive dimensional solution sets The text covers the full theory from methods developed for isolated solutions in the 1980 s to the most recent research on positive dimensional sets *The Bookseller and the Stationery Trades' Journal*, 1893 Official organ of the book trade of the United Kingdom **Iterative Methods for the Solution of Equations** Joseph Frederick Traub, 1982 From the Preface 1964 This book presents a general theory of iteration algorithms for the numerical solution of equations and systems of equations The relationship between the quantity and the quality of information used by an algorithm and the efficiency of the algorithm is investigated Iteration

functions are divided into four classes depending on whether they use new information at one or at several points and whether or not they reuse old information Known iteration functions are systematized and new classes of computationally effective iteration functions are introduced Our interest in the efficient use of information is influenced by the widespread use of computing machines The mathematical foundations of our subject are treated with rigor but rigor in itself is not the main object Some of the material is of wider application Most of the material is new and unpublished Every attempt has been made to keep the subject in proper historical perspective *Becoming Literate in Mathematics and Science* ,2001 Books in Print ,1962 **Journal of Education and School World** ,1889
