All Of Statistics A Concise Course In Statistical Inference:

All of Statistics Larry Wasserman, 2004-09-17 This book is for people who want to learn probability and statistics quickly. It brings together many of the main ideas in modern statistics in one place. The book is suitable for students and researchers in statistics, computer science, data mining, and machine learning. This book covers a much wider range of topics than a typical introductory text on mathematical statistics. It includes modern topics like nonparametric curve estimation, bootstrapping, and classification topics that are usually relegated to follow-up courses. The reader is assumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. The text can be used at the advanced undergraduate and graduate level. Larry Wasserman is Professor of Statistics at Carnegie Mellon University. He is also a member of the Center for Automated Learning and Discovery in the School of Computer Science. His research areas include nonparametric inference, asymptotic theory, causality, and applications to astrophysics, bioinformatics, and genetics. He is the 1999 winner of the Committee of Presidents of Statistical Societies Presidents Award and the 2002 winner of the Centre de recherches mathématiques de Montreal Statistical Society of Canada Prize in Statistics. He is Associate Editor of The Journal of the American Statistical Association and The Annals of Statistics. He is a fellow of the American Statistical Association and of the Institute of Mathematical Statistics.

All of Statistics Larry Wasserman, 2014-09-01 **Climate Time Series Analysis** Manfred Mudelsee, 2014-06-27 Climate is a paradigm of a complex system. Analysing climate data is an exciting challenge which is increased by non-normal distributional shape, serial dependence, uneven spacing, and timescale uncertainties. This book presents bootstrap resampling as a computing intensive method able to meet the challenge. It shows the bootstrap to perform reliably in the most important statistical estimation techniques: regression, spectral analysis, extreme values, and correlation. This book is written for climatologists and applied statisticians. It explains step by step the bootstrap algorithms including novel adaptations and methods for confidence interval construction. It tests the accuracy of the algorithms by means of Monte Carlo experiments. It analyses a large array of climate time series giving a detailed account on the data and the associated climatological questions. Comprehensive mathematical and statistical summary of time series analysis techniques geared towards climate applications accessible to readers with knowledge of college level calculus and statistics.
