Biological Prototypes and Synthetic Systems E. E. Bernard, 2012-12-06 When the present symposium was first conceived it was decided that more emphasis be given to contributions from biological laboratories than has typically appeared in previous bionics meetings Accordingly most of the invited speakers are biologists in the broad sense of representing some area of the life sciences Likewise many of the submitted papers eventually chosen by the technical committee were from the life sciences rather than the physical sciences or mathematics In this way it was hoped that a greater direct interest in the technological problems of bionics might be stimulated among biologists upon whose work much of the success of bionics necessarily lies Because of the wide interdisciplinary span of the papers it was necessary to impose some artificial organization upon them specifically for continuity in the transactions We elected to put the biological papers first followed by those which deal with reasonably specific models and reserve to the last those papers reporting models which are more general in nature The editorial function was kept to a minimum with no major alterations of content and few of style being exercised Several of the papers delivered at the symposium required a longer format for clarity and are included here in expanded versions Assistance in the preparation of this volume was received from the National Institute of Neurologic Diseases and Blindness Grant number B 3896

Global change and human vulnerability to vector-borne diseases

Rubén Bueno-Marí, Ricardo Jiménez-Peydró, It is well known that several climatic environmental and socio demographic changes that have occurred in the last years are some of the most important causes for the emergence resurgence of vector borne diseases worldwide Global change can be defined as the impact of human activity on the fundamental mechanisms of biosphere functioning Therefore global change includes not only climate change but also habitat transformation water cycle modification biodiversity loss synanthropic incursion of alien species into new territories or introduction of new chemicals in nature On this respect some of the effects of global change on vector borne diseases can be currently evaluated Globalization has enabled the movement of parasites viruses and vectors among different countries or even at intercontinental level On this regard it is important to note that the increase of imported malaria cases in different Southern European countries has led to the re appearance of autochthonous cases of disease transmission Moreover the used tire trade together with global warming have facilitated the introduction spread and establishment of potential Dengue tropical vectors such as *Aedes aegypti* or *Aedes albopictus* in temperate areas Consequently recently the first Dengue indigenous cases in the last decades have been reported in different Southern areas of North America and Europe Furthermore habitat modification mainly deforestation and transformation of aquatic environments together with the changes in thermal and rainfall patterns are two of the key factors to explain the increasing incidence of Leishmaniasis and several tick borne diseases The aim of this Research Topic is to cover all related fields with the binomial vector borne diseases global change including basic and applied research approaches to control measures explanations of new theories opinion articles reviews etc To discuss these

issues a holistic and integrative point of view is necessary which only would be achieved by the close and active participation of specialists on entomology parasitology virology and epidemiology Our objective is to use a systems approach to the problem of global change and vector borne diseases To achieve this ambitious goal and to comply with a demand of first rate scientific and medical interest we are very keen on asking for the participation of multiple contributors
