Chemical Processes Sebastian Recker,2017 In industrial practice conceptual process design is typically conducted by
repetitive simulation studies which require detailed design specifications in an early design phase Guided by heuristics these
iterative solution procedures result in high manual effort and in addition no guarantee concerning the quality of the solution
can be given Optimization based design methods provide a tremendous potential to accelerate and improve conceptual
process design For this purpose a synthesis framework for the optimization based design of chemical processes is presented
in this thesis Powerful shortcut and rigorous evaluation methods for reaction and distillation are presented These methods
are computationally efficient in order to allow an optimization based design of large scale chemical processes Various
industrial case studies illustrate the application of the novel approaches and highlight their benefits
