Repeat Amino Acid Sequences in Proteins Vladimir N. Uversky, Munishwar Nath Gupta, 2025-09-16 Repeat amino acid sequences are important in protein structure disorder function and evolution Repeats of some amino acids exist in proteomes across species This volume highlights Which repeat sequences have pathogenic consequences and why Repeats which lead to surface hydrophobic clusters and their importance Role of aromatic amino acid clusters in protein protein and protein drug interactions Cell penetrating peptides and Elastin like peptides Unusual phenomenon of fluorescence observed with repeats of some non aromatic amino acids The use of residue cluster classes to represent protein structure and model structure function relationships

Wild Immunology—The Answers Are Out There Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species

Drew Harvell, 2021-04-13 Inducible defenses those often dramatic phenotypic shifts in prey activated by biological agents ranging from predators to pathogens are widespread in the natural world Yet research on the inducible defenses used by vertebrates invertebrates and plants in terrestrial marine and freshwater habitats has largely developed along independent lines Ralph Tollrian and Drew Harvell seek to change that here By bringing together leading researchers from all fields to review common themes and explore emerging ideas this book represents the most current and comprehensive survey of knowledge about the ecology and evolution of inducible defenses Contributors examine organisms as different as unicellular algae and higher vertebrates and consider defenses ranging from immune systems to protective changes in morphology behavior chemistry and life history The authors of the review chapters case studies and theoretical studies pinpoint unifying factors favoring the evolution of inducible defenses Throughout the volume emphasizes a multidisciplinary approach integrating applied and theoretical ecology evolution genetics and chemistry In addition Harvell and Tollrian provide an introduction and a conclusion that review the current state of knowledge in the field and identify areas for future research The contributors in addition to the editors are May Berenbaum Arthur Zangerl Johannes J. Needleman, 2013-06-29 All the King's horses and all the King's men couldn't put Humpty Dumpty together again It is entirely possible that the difficulty facing all the King's men was principally the lack of a sufficient guide to the techniques of reassembling from a series of small components the original entity It is the sincere hope of the editor of the present work and of each of the contributing authors that the modern researcher will not face a similar predicament in his endeavours to reconstruct the complete primary sequence of a protein from the array of component amino acids Rather it is the intent that with this volume he may proceed untimorously if not with outright confidence toward achieving his purpose To the newcomer in protein sequencing compelled by necessity or fascination to investigate the exact order of amino acids in proteins the question of where to begin or how to do it is urgent To those more skilled a ready source of additional techniques should nevertheless be of value This volume attempts to present in a single source a discussion of the methods and techniques useful to the determination of the primary structures of proteins and peptides Hopefully this book will tell the reader how to do it **Collecting Experiments** Bruno J. Strasser, 2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for

producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers collectors curators and analysts Collecting Experiments traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century **Bioanalytics** Friedrich Lottspeich,Joachim W.
