It offers a lively informative and timely look at a wide variety of key issues facing all of us today including questions of race, sex, gender, the nature of language, religion, ethics, knowledge, consciousness, and ultimately the meaning of life. Some of the questions examined are: Did evolution make men and women fundamentally different? Is the concept of race merely a social construction? Is morality, including universal human rights, a mass delusion? Can religion and evolution really be harmonized? Does evolution render life meaningless? Designed for students and anyone with an interest in the relationship between evolutionary heritage and human nature, the text takes an interdisciplinary approach and offers direction for further reading and research. Each chapter presents a main topic together with discussion of related ideas and arguments from various perspectives. Explorations in Time-Frequency Analysis Patrick Flandrin, 2018-09-06. An authoritative exposition of the methods at the heart of modern non-stationary signal processing from a recognised leader in the field. Offering a global view that favours interpretations and historical perspectives, it explores the basic concepts of time-frequency analysis and examines the most recent results and developments in the field in the context of existing lesser-known approaches. Several example waveform families from bioacoustics, mathematics, and physics are examined in detail with the methods for their analysis explained using a wealth of illustrative examples. Methods are discussed in terms of analysis geometry and statistics. This is an excellent resource for anyone wanting to understand the why and how of important methodological developments in time-frequency analysis including academics and graduate students in signal processing and applied mathematics as well as application-oriented scientists.

groundbreaking new book Daniel Everett seeks answers to questions that have perplexed thinkers from Plato to Chomsky: when and how did language begin? What is it and what is it for? Daniel Everett confounds the conventional wisdom that language originated with *Homo sapiens* 150,000 years ago and that we have a language instinct. Drawing on evidence from a wide range of fields including linguistics, archaeology, biology, anthropology, and neuroscience, he shows that our ancient ancestors *Homo erectus* had the biological and mental equipment for speech one and a half million years ago and that their cultural and technological achievements including building ocean-going boats make it overwhelmingly likely they spoke some kind of language. *How Language Began* sheds new light on language and culture and what it means to be human and as always Daniel Everett spices his account with incident and anecdote. His book is convincing, arresting, and entertaining.
