

The Digestive System

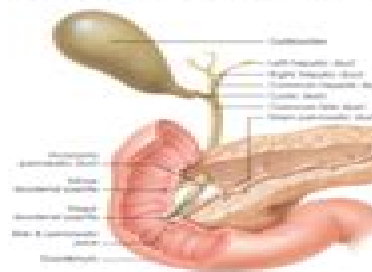

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

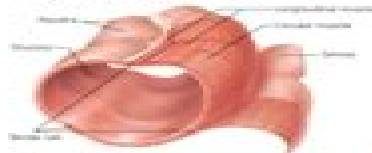

Liver, pancreas & gallbladder

After leaving the stomach, chyme moves into the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver** and pancreatic juice secreted by the **pancreas**. This area is a mixing region on the intestine where the digestive system continues. The **gallbladder** stores bile and releases it into the duodenum.

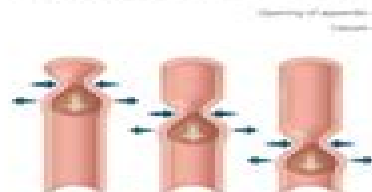

Layers of large intestine

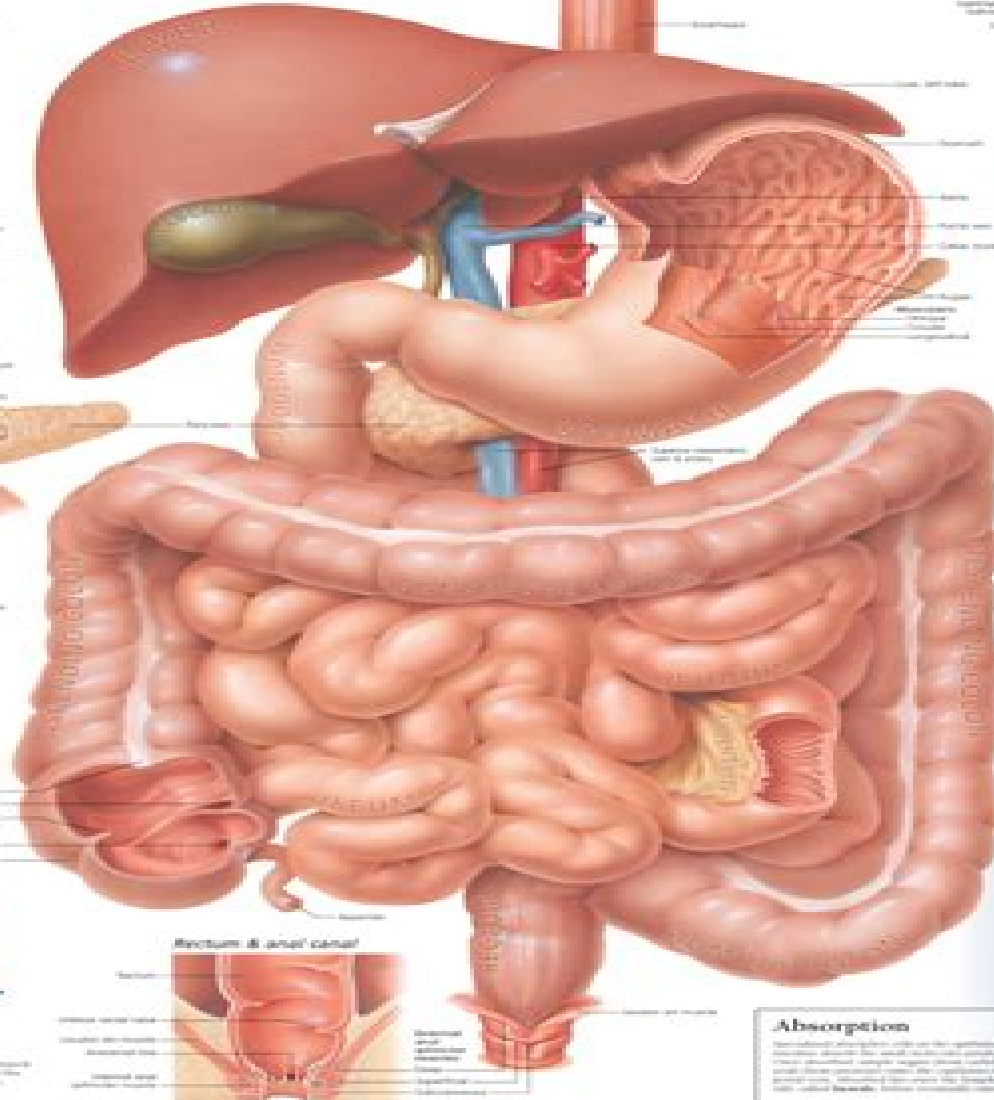

Large intestine

The large intestine consists of the cecum, the colon, and the rectum. It is responsible for absorbing water and electrolytes from the undigested food, forming feces. The large intestine is divided into the cecum, ascending colon, transverse colon, descending colon, sigmoid colon, rectum, and anal canal.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful muscular contractions called peristalsis. These contractions move the material forward and the wave which, called the peristaltic wave, moves the material forward.

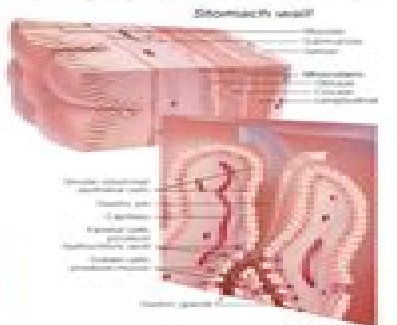

The mouth & salivary glands

Chewing the food breaks it into smaller pieces, making it easier to swallow. Saliva, secreted by the salivary glands, moistens the food and helps in the digestion of carbohydrates. Saliva also contains enzymes that help in the digestion of proteins and fats.

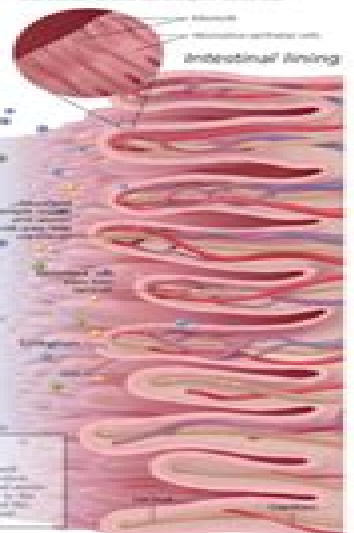

The stomach

The stomach is a large, muscular organ that is responsible for the digestion of food. It is located in the upper left part of the abdomen. The stomach has a thick wall and is divided into two main parts: the cardia and the pylorus.

Small intestine

The small intestine is a long, coiled tube that is responsible for the digestion of food. It is located in the upper right part of the abdomen. The small intestine is divided into three parts: the duodenum, the jejunum, and the ileum.

Absorption

The small intestine is responsible for the absorption of nutrients from the food. The villi, which are small finger-like projections, increase the surface area of the intestinal lining, allowing for the absorption of nutrients.
