ECHO: A Vocal Language Program for Easing Anxiety in Conversation is for clinicians supporting individuals who may experience social anxiety related to speaking in specific situations or with certain individuals. Anxiety has a negative impact on working memory, which can make it difficult for individuals to communicate with ease. With reduced experiences talking to a variety of people in various situations, speaking often becomes more challenging. This unique intervention program combines methods of vocalization and verbalization to enhance conversational skills with role-play simulations for real-life application. There are three modules in the ECHO program that build upon each other. Module 1 uses interactive games to focus on vocal control, helping the child or teen learn how to initiate voice, modulate intonation and volume with greater ease, and produce classes of speech sounds in words and sentences.
