Gun Rights Activists and the US Culture War Joe Anderson, 2024-02-23 Gun Rights Activists and the US Culture War is a political anthropology book which explores how firearms can become associated with processes of identity formation as well as acting as symbols of national belonging and embodied safety In the years following Donald Trump s election an increasingly polarised population is taking up arms against each other more often than ever before Based on 12 months of participant observation at gun ranges activist meetings handgun courses and political events as well as interviews with gun rights activists in San Diego County this book argues that US conservative identity is saturated with concerns about ethics gender and who can wield violence legitimately The book focuses on two gun rights organisations the first a conservative predominantly white and male political action committee the second a pro LGBTQ firearms training group run by trans women This book demonstrates how gun ownership gives Americans the perceived means to enact their political will through the threat of or actual organized violence and that this perceived capacity explains why guns remain objects that continue to inspire such devotion and debate Gun Rights Activists and the US Culture War will be of interest to scholars and students in anthropology gender studies ethnic studies sociology and politics as well as a general audience of narrative non fiction readers

Stress in Teachers Jack Dunham, Ved Prakash Varma, 1998-08-10 Examines the stress in teaching multidisciplinary concept broad enough to include physiological psychological organisational and legal perspectives The editors see stress in teaching as an interactionist concept a complex and sometimes precarious balance between perceived work pressures coping strategies and stress reactions The early chapters in the book reflect this view and make contributions to understanding the causes and costs of stress in teaching The authors of these chapters come collectively to the conclusion that there is an alarmingly low level of job satisfaction in teaching and that turnover intentions appear to be on the increase This pessimistic view is challenged in later chapters by professionals working in the field of stress management These contributions highlight the danger of focusing stress research and management These contributions highlight the danger of focusing stress research and management strategies on the individual rather than the organization and report the authors hands on knowledge of teacher support teams and workshop and whole school approaches to diminishing the causes and costs of teacher stress and improving training and career development The concluding chapters demonstrate the editors belief that useful insights for workers in the education service can be gained from studies of workplace stress in other occupations
