Reading Comprehension – Informational Passage

Directions: Read the passage. Then answer questions about the passage below.

The year 2006 was the golden anniversary, or the 50th birthday, of the Dwight D. Eisenhower National System of Interstate and Defense Highways. This system, usually referred to as The Interstate Highway System, is a system of highways named after the U.S. President who supported it. The system is the largest highway system in the world, consisting of 46,376 miles (74,840 km) of highways. The construction of the interstate highway system is an important part of American history. It has played a major role in preserving and improving the American way of life.

The Interstate highway system has several major functions. One of its major functions is to facilitate the distribution of U.S. goods. Because the interstate passes through every American state, it plays an important role in the distribution of almost all goods in the United States. Nearly all products, from an item part of the way to their destination on the Interstate System. Another major function of the Interstate system is to facilitate military troop movements to and from airports, seaports, rail terminals and other military installations. The Interstate highways are constructed to meet the Interregional Highway Network, which is a system of highways that are signed by the U.S. Department of Defense.

Today, most of the Interstate system consists of newly constructed highways. The longest stretch of the Interstate system runs from Boston, Massachusetts to Seattle, Washington. It covers 3,000.54 miles. The shortest two-lane interstate is from Emory, North Carolina to Concord, North Carolina. It covers only 12.27 miles. All state capitals except Fort and several other systems. The five that are not directly served are Jackson, MS, Denver, CO, Salt Lake City, UT, Carson City, NV, and Phoenix, AZ. The Interstate Highway System serves almost all major U.S. cities.

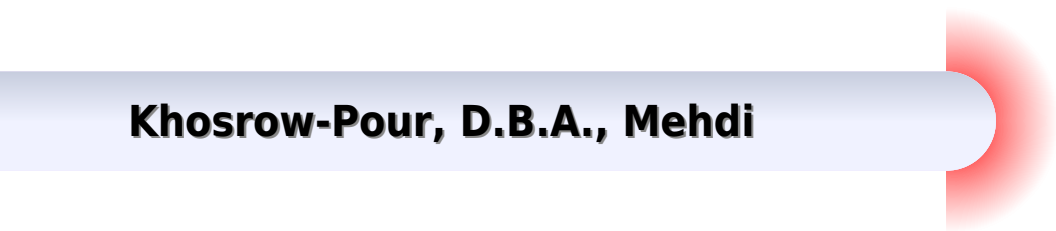

Each Interstate highway is marked with a red, white, and blue shield with the word "Interstate," the name of the state, and the route number. Interstate highways are marked with one or two-digit numbers. North-south highways are designated with odd numbers; east-west highways are marked with even numbers. The north-south Interstate highways begin in the north with the lowest even numbers. From east-west numbers at each mile off the Interstate system, starting at the beginning or end of the road just on the highway. Every Interstate highway begins with the number "1." Branches are numbered according to their location on the highway by relation to mileage; an even number indicates a branch that divides to a divided road, which is a road branching off the highway. Despite the common perception of the numbering system on the Interstate highways, most states have adopted different numbering systems. For example, a portion of the Interstate 95 in Arizona is numbered as kilometers instead of miles since the highway goes south to Mexico.

Since the Interstate highways are freeways – highways that do not have stop signs and cross-traffic – they have the highest speed limits in the nation. Most Interstate highways have speed limits between 65–75 miles per hour (105–120 kilometers per hour), but some areas in Texas and Utah have an 80 miles per hour (130 kilometers per hour) speed limit.

The federal government primarily funds interstate highways. However, they are owned and operated by the individual state or toll authorities in the states. The federal government provides funds up to 90% of the cost of an interstate highway, while the state pay the remainder of the cost.
