

Problem 4: Daily log returns of American Express stock from 1999 to 2008.

- Skewness: test-statistic is $t = -0.336/\sqrt{6/2515} = -6.888$ with p value 5.66×10^{-12} . Thus, we reject the null hypothesis of no skewness at the 5% level.
- Kurtosis: test-statistic is $t = \frac{6.486}{\sqrt{24/2515}} = 66.40$, which is large and has a p value close to zero. Thus, we reject the null hypothesis of zero excess kurtosis. That is, the distribution of the log returns has heavy tails.

Problem 5: Summary statistics for daily foreign exchange rates from January 4, 2000 to March 27, 2009.

Currency	mean	Variance	Skew	Ex. Kurt.	Min.	Max.
Percentage log returns: 2322 data points						
CA	-0.0068	0.345	-0.239	8.245	-5.072	3.807
EU	0.011	0.428	0.126	2.805	-3.003	4.621
JP	-0.002	0.440	-0.671	4.581	-5.216	2.708
UK	-0.006	0.382	-0.395	7.061	-4.966	4.435

The sample means of daily log returns of the exchange rates considered are small. The returns all have positive excess kurtosis, indicating heavy tails.

Analysis Of Financial Time Series Solution Manual:

Analysis of Financial Time Series Ruey S. Tsay, 2010-10-26 This book provides a broad mature and systematic introduction to current financial econometric models and their applications to modeling and prediction of financial time series data. It utilizes real world examples and real financial data throughout the book to apply the models and methods described. The author begins with basic characteristics of financial time series data before covering three main topics: Analysis and application of univariate financial time series; The return series of multiple assets; Bayesian inference in finance methods. Key features of the new edition include additional coverage of modern day topics such as arbitrage, pair trading, realized volatility and credit risk modeling, a smooth transition from S-Plus to R and expanded empirical financial data sets. The overall objective of the book is to provide some knowledge of financial time series, introduce some statistical tools useful for analyzing these series and gain experience in financial applications of various econometric methods. Loss Models: From Data to Decisions, 4e Student Solutions Manual Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot, 2014-08-21 Student Solutions Manual to Accompany Loss Models From Data to Decisions Fourth Edition. This volume is organised around the principle that much of actuarial science consists of the construction and analysis of mathematical models which describe the process by which funds flow into and out of an insurance system. **Financial Data Analysis Using Python** Dmytro Zherlitsyn, 2024-12-26 This book will introduce essential concepts in financial analysis: methods, models, covering time series analysis, graphical analysis, technical and fundamental analysis, asset pricing and portfolio theory, investment and trade strategies, risk assessment and prediction and financial ML practices. The Python programming language and its ecosystem libraries such as Pandas, NumPy, SciPy, statsmodels, Matplotlib, Seaborn, Scikit-learn, Prophet and other data science tools will demonstrate these rooted financial concepts in practice examples. This book will also help you understand the concepts of financial market dynamics, estimate the metrics of financial asset profitability, predict trends, evaluate strategies, optimize portfolios and manage financial risks. You will also learn data analysis techniques using the Python programming language to understand the basics of data preparation, visualization and manipulation in the world of financial data. **FEATURES** Illustrates financial data analysis using Python data science libraries techniques. Welcome to the future of finance transformation **Statistical Analysis of Financial Data** James Gentle,2020-03-12
Statistical Analysis of Financial Data covers the use of statistical analysis and the methods of data science to model and analyze financial data The first chapter is an overview of financial markets describing the market operations and using exploratory data analysis to illustrate the nature of financial data The software used to obtain the data for the examples in the first chapter and for all computations and to produce the graphs is R However discussion of R is deferred to an appendix to the first chapter where the basics of R especially those most relevant in financial applications are presented and illustrated The appendix also describes how to use R to obtain current financial data from the internet Chapter 2 describes the methods of exploratory data analysis especially graphical methods and illustrates them on real financial data Chapter 3 covers probability distributions useful in financial analysis especially heavy tailed distributions and describes methods of computer simulation of financial data Chapter 4 covers basic methods of statistical inference especially the use of linear models in analysis and Chapter 5 describes methods of time series with special emphasis on models and methods applicable to analysis of financial data Features Covers statistical methods for analyzing models appropriate for financial data especially models with outliers or heavy tailed distributions Describes both the basics of R and advanced techniques useful in financial data analysis Driven by real current financial data not just stale data deposited on some static website Includes a large number of exercises many requiring the use of open source software to acquire real financial data from the internet and to analyze it

Learning and Soft Computing Vojislav Kecman,2001 This textbook provides a thorough introduction to the field of learning from experimental data and soft computing Support vector machines SVM and neural networks NN are the mathematical structures or models that underlie learning while fuzzy logic systems FLS enable us to embed structured human knowledge into workable algorithms The book assumes that it is not only useful but necessary to treat SVM NN and FLS as parts of a connected whole Throughout the theory and algorithms are illustrated by practical examples as well as by problem sets and simulated experiments This approach enables the reader to develop SVM NN and FLS in addition to understanding them The book also presents three case studies on NN based control financial time series analysis and computer graphics A solutions manual and all of the MATLAB programs needed for the simulated experiments are available
