The Influence of Technology on Social Network Analysis and Mining Tansel Özyer,Jon Rokne, Gerhard Wagner, Arno H.P. Reuser, 2013-03-15 The study of social networks was originated in social and business communities In recent years social network research has advanced significantly the development of sophisticated techniques for Social Network Analysis and Mining SNAM has been highly influenced by the online social Web sites email logs phone logs and instant messaging systems which are widely analyzed using graph theory and machine learning techniques People perceive the Web increasingly as a social medium that fosters interaction among people sharing of experiences and knowledge group activities community formation and evolution This has led to a rising prominence of SNAM in academia politics homeland security and business This follows the pattern of known entities of our society that have evolved into networks in which actors are increasingly dependent on their structural embedding General areas of interest to the book include information science and mathematics communication studies business and organizational studies sociology psychology anthropology applied linguistics biology and medicine

New Trends in Data Warehousing and Data Analysis Stanislaw Kozielski, Robert Wrembel, 2008-10-23 Most of modern enterprises institutions and organizations rely on knowledge based management systems In these systems knowledge is gained from data analysis Today knowledge based management systems include data warehouses as their core components Data integrated in a data warehouse are analyzed by the so called On Line Analytical Processing OLAP applications designed to discover trends patterns of behavior and anomalies as well as finding dependencies between data Massive amounts of integrated data and the complexity of integrated data coming from many different sources make data integration and processing challenging New Trends in Data Warehousing and Data Analysis brings together the most recent research and practical achievements in the DW and OLAP technologies It provides an up to date bibliography of published works and the resource of research achievements Finally the book assists in the dissemination of knowledge in the field of advanced DW and OLAP

Advances in Machine Vision, Image Processing, and Pattern Analysis Nanning Zheng, 2006-08-11 This book collects the proceedings of the International Workshop on Intelligent Computing in Pattern Analysis Synthesis IWICPAS 2006 held in Xi an China alongside the 18th International Conference on Pattern Recognition ICPR 2006 The book presents 51 revised full papers and 128 revised poster papers organized in topical sections on object detection tracking and recognition pattern representation and modeling visual pattern modeling image processing compression and coding and texture analysis synthesis

Tools and Algorithms for the Construction of Analysis of Systems W. Rance Cleaveland, 2003-05-21 ETAPS 99 is the second instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was

established in 1998 by combining a number of existing and new conferences This year it comprises ve conferences FOSSACS FASE ESOP CC TACAS four satellite workshops CMCS AS WAGA CoFI seven invited lectures two invited tutorials and six contributed tutorials The events that comprise ETAPS address various aspects of the system velopment process including speci cation design implementation analysis and improvement The languages methodologies and tools which support these tivities are all well within its scope Dieren t blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Mathematical Analysis, its Applications and Computation

Paula Cerejeiras,Michael Reissig,2022-05-11 This volume includes the main contributions by the plenary speakers from the ISAAC congress held in Aveiro Portugal in 2019 It is the purpose of ISAAC to promote analysis its applications and its interaction with computation Analysis is understood here in the broad sense of the word including differential equations integral equations functional analysis and function theory With this objective ISAAC organizes international Congresses for the presentation and discussion of research on analysis The plenary lectures in the present volume authored by eminent specialists are devoted to some exciting recent developments in topics such as science data interpolating and sampling theory inverse problems and harmonic analysis *Gaussian Processes for Positioning Using Radio Signal Strength Measurements* Yuxin Zhao,2019-02-27 Estimation of unknown parameters is considered as one of the major research areas in statistical signal processing In the most recent decades approaches in estimation theory have become more and more attractive in practical applications Examples of such applications may include but are not limited to positioning using various measurable radio signals in indoor environments self navigation for autonomous cars image processing radar tracking and so on One issue that is usually encountered when solving an estimation problem is to identify a good system model which may have great impacts on the estimation performance In this thesis we are interested in studying estimation problems particularly in inferring the unknown positions from noisy radio signal measurements In addition the modeling of the system is studied by investigating the relationship between positions and radio signal strength measurements One of the main contributions of this thesis is to propose a novel indoor positioning

framework based on proximity measurements which are obtained by quantizing the received signal strength measurements. Sequential Monte Carlo methods to be more specific particle filter and smoother are utilized for estimating unknown positions from proximity measurements. The Cramér-Rao bounds for proximity based positioning are further derived as a benchmark for the positioning accuracy in this framework. Secondly to improve the estimation performance Bayesian non parametric modeling namely Gaussian processes have been adopted to provide more accurate and flexible models for both dynamic motions and radio signal strength measurements. Then the Cramér-Rao bounds for Gaussian process based system models are derived and evaluated in an indoor positioning scenario. In addition we estimate the positions of stationary devices by comparing the individual signal strength measurements with a pre constructed fingerprinting database. The positioning accuracy is further compared to the case where a moving device is positioned using a time series of radio signal strength measurements. Moreover Gaussian processes have been applied to sports analytics where trajectory modeling for athletes is studied. The proposed framework can be further utilized to carry out for instance performance prediction and analysis health condition monitoring etc. Finally a grey box modeling is proposed to analyze the forces particularly in cross country skiing races by combining a deterministic kinetic model with Gaussian process.

Fundamental Approaches to Software Engineering Stefania Gnesi, Arend Rensink, 2014-03-21. This book constitutes the proceedings of the 17th International Conference on Fundamental Approaches to Software Engineering FASE 2014 held as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2014 which took place in Grenoble France in April 2014. The 28 papers included in this volume together with one invited talk were carefully reviewed and selected from 125 submissions. They have been organized in topical sections on modeling and model transformation time and performance static analysis scenario based specification software verification analysis and repair verification and validation graph transformation and debugging and testing.
