

## Anatomy of a Wave Worksheet **Answers**

**Objective:** Identify the parts of a wave and draw your own diagrams of waves.

**Background:** Many types of waves exist, including electromagnetic waves and mechanical waves. Waves move in different ways and have different properties.

### Part 1

In the diagram below, identify the parts of a wave by using the provided definitions.

- # 5 = **crest**                      The highest point of the wave above the line of origin.
- # 2 = **trough**                      The lowest point of the wave below the line of origin.
- # 1 = **line of origin**              Signifies the original position of the medium.
- # 3 = **wavelength**              The distance between two consecutive crests.
- # 4 = **amplitude**                  The distance from the line of origin to a crest or trough of a wave.

### Part 2

On separate sheets of graph paper, draw four different waves with the following measurements. Label the parts and include the measurements.

| wave # | crest  | trough | wavelength |
|--------|--------|--------|------------|
| 1      | 1 cm   | 1 cm   | 2 cm       |
| 2      | 3.5 cm | 3.5 cm | 2.5 cm     |
| 3      | .5 cm  | .5 cm  | 3 cm       |
| 4      | 2 cm   | 2cm    | .5 cm      |

**Concluding question:** State which wave you think has the *highest frequency* and which might have the *lowest frequency*. Explain the reasons for your selections.

#4 has the highest frequency because it has the shortest wavelength, and frequency is inversely proportional to wavelength.

#3 has the lowest frequency because it has the longest wavelength, and frequency is inversely proportional to wavelength.
