ACSM's Resource Manual for Guidelines for Exercise Testing and Prescription David P. Swain, ACSM, Clinton A. Brawner, 2012-12-26 ACSM's Resource Manual for Guidelines for Exercise Testing and Prescription was created as a complement to ACSM's Guidelines for Exercise Testing and Prescription and elaborates on all major aspects of preventative rehabilitation and fitness programs and the major position stands of the ACSM. The 7th edition provides information necessary to address the knowledge, skills, and abilities set forth in the new edition of Guidelines and explains the science behind the exercise testing and prescription. ACSM's Resource Manual is a comprehensive resource for those working in the fitness and clinical exercise fields as well as those in academic training. Perceived Exertion Laboratory Manual Luke Haile, Michael Gallagher, Jr., Robert J. Robertson, 2014-11-07 This manual provides laboratory-based learning experiences in perceptually and psychosocially linked exercise assessment, prescription, and programming. The primary pedagogic outcome is the ability to use applied theory and practice in perceptual and psychosocial exercise assessment and program design to promote the adoption and maintenance of a physically active lifestyle enhancing overall health fitness. Perceptual and psychosocial variables are presented in individual stand-alone laboratory modules that can supplement existing curricula such as exercise and sport psychology, exercise physiology, exercise testing and prescription, and exercise training and conditioning. In addition, the complete modular set has a conceptual flow that allows its presentation as an entire laboratory-based course. The laboratory modules are divided into three primary units: assessment, theoretical constructs, scales, and procedures; tests; prescription; self-regulation; performance; and program evaluation. The manual uses a unique format in which case studies are embedded in the conceptual flow of each lab module, facilitating translation of laboratory results to real-world application. The manual concludes with a discussion of perceptually and psychosocially linked exercise prescription and programming applications in public health such as program monitoring and adherence.
