

Gearshift linkage

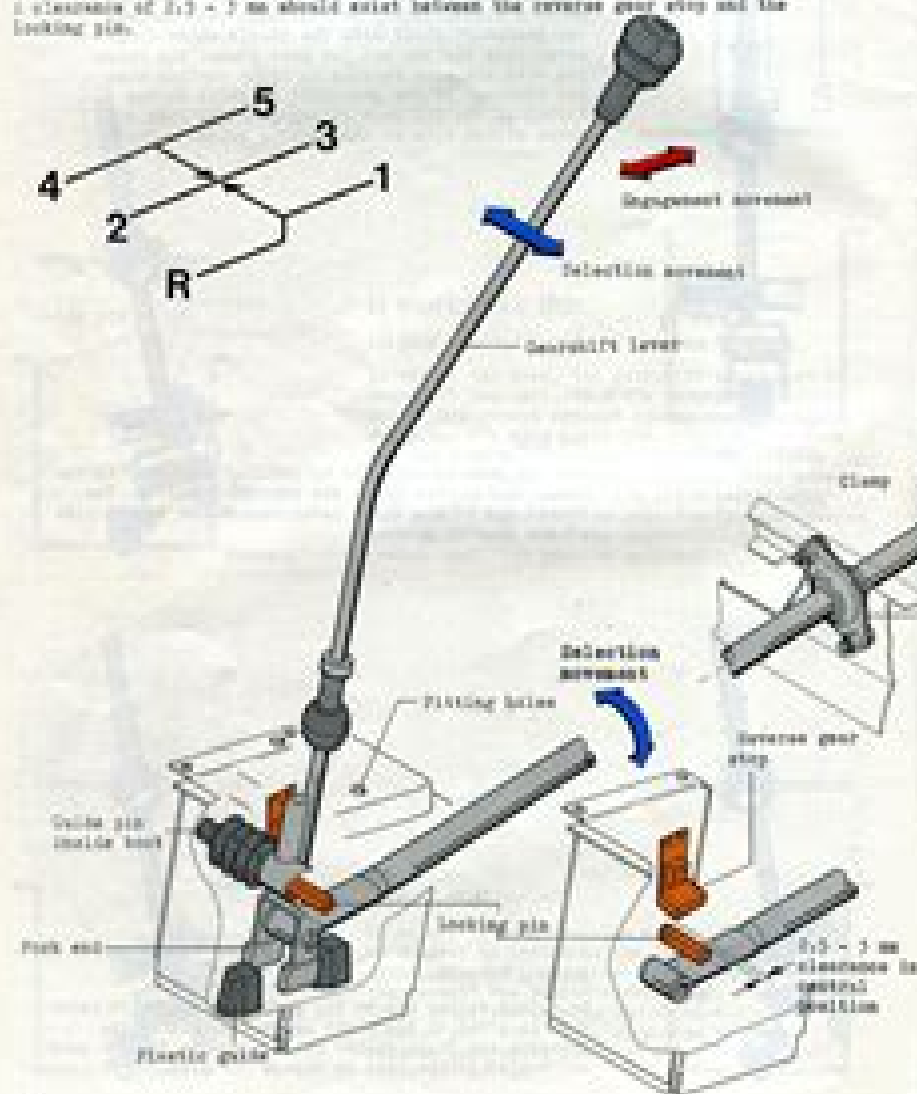

5 speed gearbox

The gearshift lever together with its mounting must be fitted so that the fitting holes in the vehicle floor and in the gearshift lever bracket align with one another. The lever is then correctly located for all gear selection actions.

To ensure that the gearshift lever aligns properly to the gearshift shaft, attention must be paid to the following:

The lever should be positioned in the selection plates so that the guide pin with bush just makes contact with the housing wall.

A clearance of 2.5 - 3 mm should exist between the reverse gear stop and the locking pin.

Gearshift shaft

In the neutral position, the shaft can be moved to and fro against spring pressure. The shaft always returns to itself however in the 2nd and 1st gear plates.

When making an "engagement movement" a slight clearance (approx. 2 mm) can be felt on the gearshift lever. This clearance must be adjusted.

This positioning of the gearshift shaft and the previously described positioning of the gearshift lever are preconditions before tightening the gearshift rod clamp.

A U-bolt located approximately in the middle of the shaft and compensates for rod off-set.

Shift rod mountings on the gearbox and approx. half way along the vehicle chassis provide the necessary support.
