Traveling Wave Analysis of Partial Differential Equations Graham Griffiths, William E. Schiesser, 2010-12-09 Although the Partial Differential Equations PDE models that are now studied are usually beyond traditional mathematical analysis the numerical methods that are being developed and used require testing and validation This is often done with PDEs that have known exact analytical solutions The development of analytical solutions is also an active area of research with many advances being reported recently particularly traveling wave solutions

for nonlinear evolutionary PDEs Thus the current development of analytical solutions directly supports the development of numerical methods by providing a spectrum of test problems that can be used to evaluate numerical methods This book surveys some of these new developments in analytical and numerical methods and relates the two through a series of PDE examples The PDEs that have been selected are largely named since they carry the names of their original contributors These names usually signify that the PDEs are widely recognized and used in many application areas The authors intention is to provide a set of numerical and analytical methods based on the concept of a traveling wave with a central feature of conversion of the PDEs to ODEs The Matlab and Maple software will be available for download from this website shortly www.pdecomp.net Includes a spectrum of applications in science engineering applied mathematics Presents a combination of numerical and analytical methods Provides transportable computer codes in Matlab and Maple

Moura, Izzat Darwazeh, 2005-03-05 Luis Moura and Izzat Darwazeh introduce linear circuit modelling and analysis applied to both electrical and electronic circuits starting with DC and progressing up to RF considering noise analysis along the way Avoiding the tendency of current textbooks to focus either on the basic electrical circuit analysis theory DC and low frequency AC frequency range on RF circuit analysis theory or on noise analysis the authors combine these subjects into the one volume to provide a comprehensive set of the main techniques for the analysis of electric circuits in these areas Taking the subject from a modelling angle this text brings together the most common and traditional circuit analysis techniques e g phasor analysis with system and signal theory e g the concept of system and transfer function so students can apply the theory for analysis as well as modelling of noise in a broad range of electronic circuits A highly student focused text each chapter contains exercises worked examples and end of chapter problems with an additional glossary and bibliography for reference A balance between concepts and applications is maintained throughout Luis Moura is a Lecturer in Electronics at the University of Algarve Izzat Darwazeh is Senior Lecturer in Telecommunications at University College London previously at UMIST An innovative approach fully integrates the topics of electrical and RF circuits and noise analysis with circuit modelling Highly student focused the text includes exercises and worked examples throughout along with end of chapter problems to put theory into practice **MATLAB Applications in Chemical Engineering** Chyi-Tsong Chen, 2022-05-20
