BioMath in the Schools Margaret B. Cozzens, Fred S. Roberts, 2011 Even though contemporary biology and mathematics are inextricably linked high school biology and mathematics courses have traditionally been taught in isolation But this is beginning to change This volume presents papers related to the integration of biology and mathematics in high school classes The first part of the book provides the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so The second part explores the development and integration of curricular materials and includes responses from teachers Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology The last paper in the book discusses what works and what doesn't and presents positive responses from students to the integration of mathematics and biology in their classes **Methods and**

Applications for Modeling and Simulation of Complex Systems Liang Li, Kyoko Hasegawa, Satoshi Tanaka, 2018-10-17 This volume constitutes the proceedings of the 18th Asia Simulation Conference AsiaSim 2018 held in Kyoto Japan in August 2018 The 45 revised full papers presented in this volume were carefully reviewed and selected from 90 submissions The papers are organized in topical sections on modeling and simulation technology soft computing and machine learning high performance computing and cloud computing simulation technology for industry simulation technology for intelligent society simulation of instrumentation and control application computational mathematics and computational science flow simulation visualization and computer vision to support simulation **Active Matter** Skylar Tibbits, 2017-09-29 The first book on active matter an emerging field focused on programming physical materials to assemble themselves transform autonomously and react to information The past few decades brought a revolution in computer software and hardware today we are on the cusp of a materials revolution If yesterday we programmed computers and other machines today we program matter itself This has created new capabilities in design computing and fabrication which allow us to program proteins and bacteria to generate self-transforming wood products and architectural details and to create clothing from intelligent textiles that grow themselves This book offers essays and sample projects from the front lines of the emerging field of active matter Active matter and programmable materials are at the intersection of science art design and engineering with applications in fields from biology and computer science to architecture and fashion These essays contextualize current work and explore recent research Sample projects generously illustrated in color show the range of possibilities envisioned by their makers Contributors explore the design of active material at scales from nano to micro kilo and even planetary They investigate processes of self-assembly at a microscopic level test new materials that can sense and actuate themselves and examine the potential of active matter in the built environment and in living and artificial systems Active Matter is an essential guide to a field that could shape the future of design *The Investment Banker's Handbook: Financial Modelling: A Practical Manual for Using Excel in Financial Modelling* , **Models for Solid Oxide Fuel Cell Systems** Dario Marra, Cesare

Principles of Performance and Reliability Modeling and Evaluation Lance Fiondella, Antonio Puliafito, 2016-04-06

This book presents the latest key research into the performance and reliability aspects of dependable fault tolerant systems and features commentary on the fields studied by Prof Kishor S Trivedi during his distinguished career. Analyzing system evaluation as a fundamental tenet in the design of modern systems, this book uses performance and dependability as common measures and covers novel ideas, methods, algorithms, techniques, and tools for the in-depth study of the performance and reliability aspects of dependable fault tolerant systems. It identifies the current challenges that designers and practitioners must face in order to ensure the reliability, availability, and performance of systems with special focus on their dynamic behaviors and dependencies and provides system researchers, performance analysts, and practitioners with the tools to address these challenges in their work. With contributions from Prof Trivedi's former PhD students and collaborators, many of whom are internationally recognized experts, to honor him on the occasion of his 70th birthday, this book serves as a valuable resource for all engineering disciplines including electrical, computer, civil, mechanical, and industrial engineering, as well as production and manufacturing.
