Investigating Connectivity to Advance the Predictive Understanding of Watershed Processes and the Earth's Critical Zone Dipankar Dwivedi,Ronald Erwin Pöpl,Ellen Wohl,2025-05-15 Connectivity implies the pathways that link organisms energy and matter across different compartments of the Earth s critical zone it also refers to the links that key processes have to deep hydrological flow paths and atmospheric circulation systems Although connectivity has been long investigated in geomorphology the usage of connectivity in other cognate disciplines such as hydrology biogeochemistry and watershed science has occurred only recently A major driver for the development of a broader definition and investigation came from the Geomorphology Symposium organized around the connectivity theme in 2015 <https://www.binghamtongeomorph.com> Six key themes from the symposium included sediment connectivity hydrologic connectivity geochemical connectivity riverine connectivity landscape connectivity and connectivity modeling Since the Geomorphology Symposium in 2015 significant progress has been achieved in understanding the evolution of connectivity and the quantification of various aspects of connectivity and its thresholds However several opportunities still exist for unlocking the full potential of a broad consideration of connectivity and thereby advancing the predictive understanding of watershed processes at multiple scales and the Earth s critical zone Here we invite theoretical and data driven contributions that can contribute using connectivity constructs Topics of interest include but are not limited to 1 Elucidation of the current state of knowledge regarding the concept of connectivity vis vis six themes mentioned above in watershed sciences and the Earth s

critical zone and its underlying theoretical assumptions 2 New approaches including machine learning and artificial intelligence that make use of a spectrum of data sources to quantify connectivity and the interactions between different types of connectivity 3 Novel frameworks making use of the broad concepts of connectivity in watershed and reactive transport models to understand hydrobiogeochemical dynamics and predict transient export of water nitrogen carbon and metals 4 Frameworks to quantify uncertainty and address inherent data challenges for diverse connectivity aspects collapse

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and suspenseful novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
