

Lesson 3.1 -- Using and Interpreting Function Notation

Graphs:

Can represent an equation, function, or relation. The graph of a function is a set of points in a coordinate plane such that no vertical line intersects the graph more than once.

Graphing a function means plotting the points that satisfy the equation. For example, the graph of $y = x^2$ is a parabola opening upwards.

Interpreting a function means understanding the context and meaning of the function. For example, if a function represents the number of people in a room over time, the function value at a certain time tells you how many people are in the room at that time.

Check Your Understanding

1. A graph of $y = f(x)$ is shown below.

a. What is $f(2)$? **2**

b. What is $f(4)$? **3**

c. What is a function value of f ?

$x > 0$ then $f(x) > 0$

2. Use this graph to answer the question. The number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a. $f(1000) = 10$

10 people are in the area 1000 feet from the house.

b. $f(1000) = 1000$

1000 people are in the area 1000 feet from the house.

3. Scientists have discovered that there is a pattern, or rule, that can determine the heading distance a car travels in the air's speed when the car's speed is 10, and then double the speed to 20.

a. Use this rule to predict the heading distance of a car moving through:

100 ft/sec

b. Write an equation for this that represents the car's heading distance when driving at a speed of x miles per hour.

$f(x) = \frac{x^2}{10}$

c. $f(1000) = 1000$

1000 people are in the area 1000 feet from the house.

d. $f(1000) = 10$

10 people are in the area 1000 feet from the house.
