Self-Help to ISC Biology Class 12 (For 2025-26 Examinations) H.S. Bishnoi, The ISC Biology Class 12 book by H S Bishnoi and Shabnam Joshi is a comprehensive guide designed to help students master both theoretical concepts and examination techniques as per the latest ISC syllabus Each chapter begins with clearly defined learning objectives and presents detailed explanations enriched with well labeled diagrams and flowcharts to simplify complex biological processes The content is structured to promote conceptual clarity while also catering to exam readiness Alongside the core theory the book includes a wide range of question formats such as short answer questions long answer essays multiple choice questions assertion reason types and diagram based problems This enables students to familiarize themselves with the types of questions commonly asked in ISC exams To enhance learning each chapter is followed by a set of practice questions with detailed answers allowing students to assess their understanding and improve their writing skills Model test papers and solved sample papers based on previous years board questions provide additional support for self assessment and revision The book also includes quick revision notes important definitions and concept based highlights that are helpful during last minute preparation Emphasis is placed on data interpretation and experiment based questions aligning the content with lab work and practical exams Overall the book strikes a perfect balance between textbook knowledge and exam oriented preparation making it an essential resource for ISC Biology students aiming for academic excellence

Genetics of Mate Choice: From Sexual Selection to Sexual Isolation W.J. Etges, M.A. Noor, 2012-12-06 Genetic studies aimed at understanding the origin of species are dominating major scientific journals In the past decade genetic tools that were previously available only in model systems have become accessible to investigators working on nearly all species Concurrent with these technical advances has been an increase in understanding of both the importance of considering the ecological context of speciation and testing hypotheses about causes for species formation Many recent studies suggest a prominent role of sexual selection in species formation These advances have produced a need for a synthesis of what we now understand about speciation and perhaps more importantly where we should go from here In this volume several leading investigators and rising stars have contributed reviews and or novel primary research findings aimed at understanding the ultimate mystery on which Darwin named his most famous and influential book Fundamental to the origin of species is the evolution of mate choice systems This collection of papers discusses burgeoning genetic evolutionary and ecological approaches to understanding the origins of mating discrimination and causes of premating reproductive isolation both within and between species The individual contributions span a wide spectrum of disciplines taxa and ideas some controversial This synthesis brings together several of the most recent ideas with supporting empirical data This book will be of particular interest to both undergraduate and postgraduate researchers and students and researchers in the field of evolutionary biology genetics and animal behaviour
