Chapter 8 Rotational Motion Banked Airplanes

An airplane banks as it turns along a horizontal circular path in the air. Except for the thrust of its engines and air resistance, the two significant forces on the plane are gravitational mg (vertical), and lift L (perpendicular to the wings).

Vector Component Analysis:

With a ruler and a pencil, resolve vector L into two perpendicular components, horizontal L_x and vertical L_y . Make these vectors dashed to distinguish them from L .

Circle the correct answers.

1. The velocity of the airplane at any instant is
[along the radius of] [tangent to] its circular path.
2. If L were somehow replaced with L_x and L_y ,
the airplane [would] [would not] behave the
same as being supported by L .
3. Since the airplane doesn't accelerate vertically, component L_y must be
[greater than] [less than] [equal and opposite to] mg .
4. Since the plane continues in circular motion, component L_x must equal [zero] [m^2/r]
and be a [centripetal] [centrifugal] [nonexistent] force. Furthermore, L_x is
[along the radius of] [tangent to] the circular path.

Vector Resultant Analysis:

5. Rather than resolving L into horizontal and
vertical components, use your pencil to
sketch the resultant of mg and L using the
parallelogram rule.
6. The resultant lies in a [horizontal] [vertical]
direction and [toward] [away from] the center
of the circular path. The resultant of mg and L is a
[centripetal] [centrifugal] force.
7. The resultant of mg and L is the same as [L_x] [L_y].

Challenge: Explain in your own words why the resultant of two vectors can be the same as a single component of one of them.

Hanson, 2020-01-29 Fifty years have passed since Norwood Russell Hanson s unexpected death yet he remains an important voice in philosophy of science This book is a revised and expanded edition of a collection of Hanson s essays originally published in 1971 edited by Stephen Toulmin and Harry Woolf The new volume features a comprehensive introduction by Matthew Lund Rowan University and two new essays The first is Observation and Explanation A Guide to Philosophy of Science originally published as a posthumous book by Harper and Row This essay written near the end of Hanson s life represents his mature philosophy of science The second new addition Hanson s essay The Trial of Galileo is something of a lost work it was only published in a small run collection on famous trials and was left out of the published lists of Hanson s works Ever the outspoken firebrand Hanson found many lessons and warnings from Galileo s trial that were relevant to Cold War America This volume not only contains Hanson s best known work in history and philosophy of science but also highlights the breadth of his philosophical thought Hanson balanced extreme versatility with a unified approach to conceptual and philosophical problems Hanson s central insight is that philosophy and science both strive to render the world intelligible the various concepts central to our attempts to make sense of the world are interdependent and cannot

operate or even be fully understood independently The essays included in this collection present Hanson's thinking on religious belief theory observation meaning cosmology modality logic and philosophy of mind This collection also includes Hanson's lectures on the theory of flight Hanson's greatest passion

Transpersonal Ecosophy, Vol. 1: Theory, Methods and Clinical Assessments Mark A. Schroll, 2016-01-24 The image on the cover of this book represents the idea that brain state alterations at sacred sites allow us to re-experience memories that are woven into the morphogenetic fields of that place an idea that originates with Paul Devereux's empirical enquiry into dreams at sacred sites in Wales and England This book examines how this investigation provides us with a new way of understanding consciousness and a new direction toward a reconciliation of the divorce between matter and spirit We explore the work of David Lukoff and Stanislav and Christina Grof the connections between the varieties of transformative experience in dream studies ecopsychology transpersonal psychology and the anthropology of consciousness as well as the overlap between David Bohm's interpretation of quantum theory and Rupert Sheldrake's hypothesis of formative causation

Quantum International Relations James Der Derian, Alexander Wendt, 2022 The contributors to this volume are motivated by a common apprehension and a common hope The apprehension was first voiced by Einstein who lamented the inability of humanity at the individual and social level to keep up with the increased speed of technological change brought about by the quantum revolution As quantum science and technology fast forward into the 21st century the social sciences remain stuck in classical 19th century ways of thinking Can such a mechanistic model of the mind and society possibly help us manage the fully realized technological potential of the quantum That's where the hope appears that perhaps quantum is not just a physical science but a human science too In Quantum International Relations James Der Derian and Alexander Wendt gather rising scholars and leading experts to make the case for quantum approaches to world politics As a fundamental theory of reality and enabler of new technologies quantum now touches everything with the potential to revolutionize how we conduct diplomacy wage war and make wealth Contributors present the core principles of quantum mechanics entanglement uncertainty superposition and the wave function as significant catalysts and superior heuristics for an accelerating quantum future Facing a reality which no longer corresponds to an outdated Newtonian worldview of states as billiard balls individuals as rational actors or power as objective interest Der Derian and Wendt issue an urgent call for a new human science of quantum International Relations At the centenary of the first quantum thought experiment in the 1920s this book offers a diversity of explorations speculations and approaches for understanding geopolitics in the 21st century
