Monoclonal Antibodies in Cancer Stewart Sell, Ralph Reisfeld, 2012-12-06 This represents the third volume in a series on cancer markers published by the Humana Press The first volume published in 1980 stressed the relationship of development and cancer as reflected in the production of markers by cancer that are also produced by normal cells during fetal development The concept that cancer represents a problem of differentiation was introduced by Barry Pierce in describing differentiation of teratocarcinomas Highlighted were lymphocyte markers alpha-fetoprotein carcinoembryonic antigen ectopic hormones enzymes and isozymes pregnancy proteins and fibronectin The second volume published in 1982 and coedited with Britta Wahren focused on the diagnostic use of oncological markers in human cancers which were systematically treated on an organ by organ basis At that time the application of monoclonal antibodies to the identification of cancer markers was still in a very preliminary stage A general introduction to monoclonal antibodies to human tumor antigens was given there by William Raschke and other authors included coverage of those markers then detectable by monoclonal antibodies in their chapters

Immunological Aspects of Neoplasia — The Role of the Thymus Bela Bodey, Stuart E. Siegel, Hans E. Kaiser, 2006-04-11 Our work began where the greatest classical morphologists left off their best work was the start of ours As our work progressed the rigidity of basic previous embryological principles was broken down as scientific knowledge advanced At the same time the molecular biological characterization of the cell surface receptor systems progressed enormously with the invention of NUMEROUS monoclonal antibodies Thus thymology became once again very important because the thymus is the first and central organ of the human immunological system Then the question of immuno neuroendocrine regulation arose and has only been partially answered Our book seeks to explore what has not been explored The topic of thymic epithelial cells is a unique one and has never been explored in any previous book as it is explored in this one Only a handful of great thymologists remain in the world today especially after the great loss the medical community suffered with the passing of Dr Good the list includes but is not limited to Dr Ritter and Dr Kendall in England Dr Savino in Brazil Dr Dardenne in France Dr von Gaudecker in Germany a few others in Belgium and Holland and it is our hope that Dr Bodey is among them Nonetheless a book on the thymus has not been written in the last five years and a book such as this one has never been This book is based on a 30 year period of research and includes references from a broad range of sources spanning the globe and all sources even those that were the beginning of thymic research The book thus is uniquely well rounded more so than previous works
