w/Brass Float

DGV Series
w/Plastic Float

Image indicates that the cover is being held vertical and plumb with both types of floats you may encounter, listed dimensions are MM.

In order to set the (R) tab hold it tilted slightly left of plumb. This will allow contact between that tab and the needle ball without causing any dampening of the spring inside the needle. This sets the float to the closed needle position. Dimension is the distance between the cover with the gasket in place and the point that the float is to be set.

Then working with tab (A) adjust and set it so that contact is made to the Valve Body (V) when the float drop is set to spec while the cover is tilted to the right.

These illustrations are intended to show a generalization of the expected drop since floats may vary in dimension.

The idea is to control the float drop to allow, without any damping of the needle ball (S1) spring, 2mm of needle travel between the closed and open positions.
