Read the passage below and answer the question nos. 1-7 that follow:

'Digital detox' is a phrase that we hear more and more, instantly conjuring up loss of control, fear of addiction and imposed periods of 'cold turkey'. As parents, many of us are still beginners in this brave new digital world and rather than empowering our youth to blaze trails into the modern age, our suspicion of Snapchat and general fear of the unknown lead us to restrict or even reject these influences as we see them encroach further into our children's lives.

It's easy to see why the accessibility to technology can be a cause of concern. Bullies, predators and other nasties do exist in the cyber world, just as they do in the natural one. But while some try to combat the influence of social media and the demon 'screen time' on pupils (banning phones and switching off Wi-Fi are two solutions that have been tried), some have adopted a more 21st Century approach. They actively embrace technology as a force for good, incorporating technology in many aspects of their learning and well-being.

It's not just about gadgets and gizmos; digital is fast becoming the language of the age and one in which we must all be literate. Pupils can learn to code and use Swift Playgrounds, an incredibly powerful app which brings their ideas to life. It's the same platform which was used to create applications like Duolingo and Airbnb. In years 10 and 11, students gain experience with professional programming language C# and the new generation can get involved in a 'tech start-up' day.

What of the virtual world? No longer restricted to the realms of entertainment, the applications of VR are enormous, and schools can incorporate exciting technology into their lessons. Learning by doing is, after all, one of the most effective and neglected methods of learning. Just as an airline pilot will train in a simulator before being let loose with a plane full of passengers, VR allows access to global resources and immersive learning experiences with which to experiment, tackle problems, and take risks, in a virtual environment, free from fear. What a wonderful way to help students develop into curious, resilient, and resourceful adults!

A recent article in the Telegraph offered 'survival tips of parents on the technology battlefield'. The battlefield metaphor is a telling one. As parents we are right to worry about the screen time we allow our children and the teenage years can be fraught with the additional pressures of social media, but should blame be laid so squarely at the digital door?

The need to connect in social groups has existed since humans first walked the earth. Most of us want to be liked and to form friendships, and psychologists agree that this kind of affirmation is important for our mental health. Social media is just one of many channels through which we all do this and as adults, we must set a good example and equip young people with the information and skills to use technology responsibly. I believe that by teaching good practice and embedding key IT skills in the classroom, we can embrace technology as our friend here.

For the well-being of our students we should adopt a positive approach. We need to work with experts in psychological health to spearhead the use of an app-based digital toolkit that helps teachers and pupils to monitor and even restrain their emotions, developing positive habits of mind, improved social Wi-Fi and a shared language with which to better communicate both in the classroom and the wider world.

Woodman,2022 An investigation into the hugely significant works produced by the Worcester foundation at a period of turmoil and change From the mid eleventh to the mid twelfth century Worcester was a monastic community of unparalleled importance Not only was it home to many of the most famous bishops and monks of the period including Bishop Wulfstan II it was also a centre of notable and ambitious scholarly production Under Wulfstan s guidance a number of Worcester brethren undertook historical research that resulted in the writing of such renowned texts as Hemming s Cartulary and the Worcester Chronica Chronicarum Significantly these historical endeavours spanned the political chasm of the Norman Conquest The essays collected here aim to shed new light on different aspects of the Worcester historical workshop whose literary ouput was in several respects pioneering in contemporary European scholarship Several chapters address the different ways in which the monks organised and updated their archives of documents both via their sequence of cartularies with a special focus on the narrative parts of Hemming s Cartulary and via an interesting and previously unedited prose account of the foundation of the see Others focus on the famous Worcester Chronica Chronicarum attributed both to Florence and to John investigating the major model for its composition and structure the work of Marianus Scotus the stages in which it was completed and its connections with Welsh chronicles as well as the related and fascinating abbreviated version written mostly in the hand of John himself and known as the Chronicula The volume thus elucidates how the Worcester monks navigated the period across the Conquest through the composition of different genres of texts and how these texts shaped their own institutional memory Nomina germanica ,1940

The Many Voices of Modern Physics Joseph E. Harmon,Alan G. Gross,2023-03-07 The Many Voices of Modern Physics follows a revolution that began in 1905 when Albert Einstein published papers on special relativity and quantum theory Unlike Newtonian physics this new physics often departs wildly from common sense a radical divorce that presents a unique communicative challenge to physicists when writing for other physicists or for the general public and to journalists and popular science writers as well In their two long careers Joseph Harmon and the late Alan Gross have explored how scientists communicate with each other and with the general public Here they focus not on the history of modern physics but on its communication In their survey of physics communications and related persuasive practices they move from peak to peak of scientific achievement recalling how physicists use the communicative tools available in particular thought experiments analogies visuals and equations to convince others that what they say is not only true but significant that it must be incorporated into the body of scientific and general knowledge Each chapter includes a chorus of voices from the many celebrated physicists who devoted considerable time and ingenuity to communicating their discoveries to the science journalists who made those discoveries accessible to the public and even to philosophers sociologists historians an opera composer and a patent lawyer With their final collaboration Harmon and Gross offer a tribute to the communicative practices of the physicists who convinced their peers and the general public that the universe is a far more bizarre and interesting place than their nineteenth century
