Richard Blanchard,Lois Farrell,2023-07-28 *Advances in Human Aspects of Aviation* Steven J. Landry,2012-07-11 Since the very earliest years of aviation it was clear that human factors were critical to the success and safety of the system As aviation has matured the system has become extremely complex Bringing together the most recent human factors work in the aviation domain Advances in Human Aspects of Aviation covers the design of aircrafts for the comfort and well being of the passenger The book discusses strategies and guidelines for maximizing comfort the design of aircrafts including cockpit design and the training and work schedules for flight attendants and pilots It is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system In keeping with a system that is vast in its scope and reach the chapters in this book cover a wide range of topics including Interface and operations issues from the perspectives of pilots and air traffic controllers respectively Specific human performance issues studied from within the context of the air transportation system Issues related to automation and the delineation of function between automation

and human within the current and future system The U S air traffic modernization effort called NextGen Diverse modeling perspectives and methods Safety and ethics as driving factors for change Cognition and work overload Empirical research and evaluation of the air transportation domain As air traffic modernization efforts begin to vastly increase the capacity of the system the issues facing engineers scientists and other practitioners of human factors are becoming more challenging and more critical Reflecting road themes and trends in this field the book documents the latest research in this area

Aviation and Human Factors Jose Sanchez-Alarcos, 2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events
