NOTICE

Care must be taken to ensure that fluids are contained during performance of inspection, maintenance, testing, adjusting, and repair of the product. Be prepared to collect the fluid with suitable containers before opening any compartment or disassembling any component containing fluids.

Refer to Special Publication, N6100000, "Oil Cooler Service, Fuel System" or refer to Special Publication, N6100000, "Oil Filter, Fuel System and Fuel System" for parts and supplies available to collect and contain fluids on Cat products.

Dispose of all fluids according to local regulations and directives.

1. Loosen the latch and pull down on the connector to remove the connector.

Note: Removing connector may be difficult while the engine is operating. The connector has negative air pressure while the engine is operating which creates a vacuum.

2. Remove the used filter. Engines oil may be contained in the filter and in the connector. Properly contain all fluids.
3. Remove the O-ring seal on the top and side of the vent stream. Install a new O-ring seal onto the top of the new filter.
4. Remove the O-ring seal from the bottom of the filter. Inspect the used seal for wear and damage. Install an undamaged O-ring seal onto the bottom of the new filter.
5. Dispose of the used filter.
6. Install a new filter. Properly align the connector with the cover and clamp the latch.

Note: Caterpillar will not be held liable for an engine that does not comply with emissions standards due to modification of the turn-based reverse filter or due to the use of a filter that is not approved by Caterpillar.

Generator - Dry

SWCS Code: N610000

NOTICE

Do not operate the generator if the windings are wet. If the generator is operated when the windings are wet, damage will occur due to insulation breakdown.

Personal injury or death can result from improper troubleshooting and repair procedures.

The following troubleshooting and repair procedures should only be performed by qualified personnel familiar with this equipment.

Refer to Safety Section, "Generator Isolating for Maintenance" for information regarding the procedure to safely isolate the generator.

When moisture is present or when moisture is suspected in a generator, the generator must be dried before being energized.

If the drying procedure does not restore the insulation resistance to an acceptable value, the winding should be reconstructed.

Drying Methods

The following methods can be used for drying a generator:

- Self-circulating air method
- Oven method
- Controlled current method
- Energize the optional space heaters

NOTICE

Do not allow the winding temperature to exceed 80 °C (196 °F). Temperatures that are greater than 80 °C (196 °F) will damage the winding insulation.

Self-Circulating Air Method

Run the engine and disconnect the generator load. This will help circulate air. Operate the generator space heaters.

Oven Method

Place the entire generator inside a forced air drying oven for four hours at 55 °C (141 °F).

NOTICE

Use a forced air type oven rather than a radiant type oven.

Radiant type ovens can cause localized overheating.
