Spielhagen, 2015-04-24 How can we increase mathematics achievement among all students This book provides a straightforward explanation of how changing mathematics tracking policies to provide algebra instruction to all students by at least eighth grade can bring about changes in both student achievement and teacher performance Spielhagen chronicles the success of a large school district that changed the way mathematics was delivered and increased success rates across all populations Featuring interviews with students and teachers the author shows how all stakeholders were brought into the process of changing policy from the ground up Offering a model for success that can be replicated by other districts this resource Provides a comprehensive account of how mathematics policy that evolved in the United States over the last century has resulted in low math literacy among our population Addresses the recommendations and counterpoints to the report of the National Mathematics Panel 2009 Includes real life examples of how stakeholders responded to the policy change that revolutionized mathematics instruction in their district Frances R Spielhagen is associate professor of education and director of the Center for Adolescent Research and Development at Mount Saint Mary College Newburgh New York Offers an elegant solution to a compelling problem in American society that has global implications Who should study algebra and when The best practices approach should be required reading for pre service and in service educators and administrators alike Readers will recognize that preparing students to learn algebra by 8th grade is as much a right as learning to read It is a right upon which our future depends Susan G Assouline Professor of School Psychology Associate Director The Connie Belin Jacqueline N Blank

International Center for Gifted Education and Talent Development The University of Iowa Frances Spielhagen's book offers a thoughtful and detailed response to one of the most important questions of our time: should all students take algebra in 8th grade? With impressive and thorough research, the author considers issues of teaching and learning as well as curriculum and policy. For all those who care about the mathematical future of our nation's children, this book is a must read. Jo Boaler, Professor of Mathematics Education, Stanford University, The School of Education.

In The Algebra Solution to Mathematics Reform, Frances R. Spielhagen shows vividly and precisely how a public school system teaches children to master mathematics skills early, culminating in 8th grade algebra, a critical subject for high school graduation and college admission. Spielhagen's book precisely demonstrates how to improve real sequential learning for students from the early grades to high school graduation and successfully into college and life. Thus, this vital book has implications for instruction in all academic subjects, providing a living model for continuity and improvement of student learning. Bruce S. Cooper, Professor, Graduate School of Education, Fordham University.

Encountering Algebra, Cecilia Kilhamn, Roger Säljö, 2019-07-03. The book reports a comparative research project about algebra teaching and learning in four countries. Algebra is a central topic of learning across the world, and it is well known that it represents a hurdle for many students. The book presents analyses built on extensive video recordings of classrooms documenting the first introduction to symbolic algebra, students aged 12 to 14. While the content addressed in all classrooms is variables, expressions, and equations, the teaching approaches are diverse. The chapters bring the reader into different algebra classrooms, discussing issues such as mathematization and social norms, the role of mediating tools, and designed examples and teacher beliefs. By comparing classrooms, new insights are generated about how students understand the algebraic content, how teachers instruct, and how both parties deal with difficulties in learning elementary algebra. The book also describes a research methodology using video in search of taken-for-granted aspects of algebra lessons.

Robitaille,Albert E. Beaton,2005-12-19 Researchers who participate in IEA studies have a unique opportunity to work collaboratively with their counterparts from many different countries and disciplinary backgrounds over a period of several years on questions of shared academic interest Once the data for a given study have been collected and the first round of international reports published however opportunities for that kind of collaboration tend to be much less frequent A major strength of IEA studies compared to other large scale international studies is that they are classroom based thereby making it possible for researchers and policy makers to investigate linkages between students achievement and a wide range of variables Those variables could be related to instructional practices to students and teachers background and attitudes to school organizational patterns or to opportunity to learn to name a few The research questions that TIMSS was designed to address make it clear that these kinds of relational multi variate analyses were among the major goals of the project The

international reports of the TIMSS 95 results that were published by the International Study Center at Boston College between 1996 and 1999 were intended to provide comprehensive coverage of the basic findings of the study. They were not intended to provide in-depth analyses of research and policy issues; instead, their main purpose was to make the basic findings of the study widely available in a timely manner. This they certainly did.
