Busting Bureaucracy to Reclaim Our Schools Stephen B. Lawton,Joseph Freedman,Heather-jane Robertson,Institute for Research on Public Policy,1995 In this book the author argues that the bureaucratization of schooling has interfered with the process of education The costs complexity and rigidity of the educational edifice leaves it unresponsive to parental concerns and reluctant to measure its own inadequacies such as illiteracy and high dropout rates among students The author identifies two conceptual bases for action to address this problem public choice theory and agency theory discusses the issue of identity in its relation to education and then makes the case for charter schools in Canada stressing definitions of community parental rights and the need to combat bureaucratic tendencies Two discussants respond to the author's analysis one amplifying his call for charter schools and the other arguing that the basis for demanding reform is less clear than the author claims

Supplementary Education Edmund W.

Gordon, Beatrice L. Bridglall, Aundra Saa Meroe, 2005 In *Supplementary Education* the editors argue that while access to schools that enable and expect academic achievement is a necessary ingredient for the education of students schools alone may not be sufficient to ensure universally high levels of academic development Supplemental educational experiences may also be needed The idea of supplementary education is based on the assumption that high academic achievement is closely associated with exposure to family and community based activities and learning experiences that occur both in and out of school in support of academic learning For low income and some ethnic minority student groups opportunities to participate in such activities are generally under resourced and underutilized in comparison to the access to and participation in such activities by many European and Asian Americans from mid to high socio economic backgrounds This book makes the case for supplementary education Specifically it focuses on the need for universal access to high levels of academic achievement and the challenge of reducing the achievement gap that exists between Asian American and European American students and their African American Latina o and Native American counterparts Having posed the problem the editors define the construct and provide in depth descriptions of some of the more colloquial expressions of supplementation in after school care youth development and other forms of supplemental education The editors close with a discussion of the emerging institutionalization and need for more thoughtful and rigorous research of the supplementary education movement

Haney, George F. Madaus, Robert Lyons, 1993-05-31 Standardized testing in the United States has been increasing at a rapid pace in the last twenty five years The market for tests has not only been expanding rapidly but has also been changing sharply in structure into a fractured marketplace Indeed one of the main features of this book is that the market for standardized testing is highly fractured with segments of the market facing monopoly conditions others facing oligopoly conditions and still others where near free market conditions exist One of the main premises of the book is that the structures of markets have strong implications for how those markets perform While this notion is widely accepted among economists it is not widely appreciated in educational research A second motivation for the book is that very little scholarly attention has been focused on the standardized testing industry This topic the structure of the testing industry and implications for the quality of tests and test use affects how we evaluate the learning of students the effectiveness of teaching the quality of schools and the educational health of the nation Of particular concern to the authors is one vital aspect of test quality test validity This book is the most current and authoritative review and analysis of the market for standardized testing
