

Algebra 2: Chapter 9 Review

1. Simplify leaving answer in standard form.

$$\frac{x^2 - y^2}{y^2 - x^2} = \frac{(x-y)(x+y)}{(y-x)(y+x)} = \frac{(x-y)}{(y-x)} = \frac{1(x-y)}{(-1)(x-y)} = -\frac{1}{1} = \boxed{-1}$$

2. Simplify and state the excluded values.

$$\frac{10x^2}{2x^2 - 6x} = \frac{(2x)(5x)}{2x(x-3)} = \boxed{\frac{5x}{x-3} \quad x \neq 0, x \neq 3}$$

3. Simplify, leaving answer in the factored form.

$$\frac{2x^2 + 5xz - 3z^2}{x^2 + 2xz - 3z^2} = \frac{(2x - z)(x + 3z)}{(x - z)(x + 3z)} = \boxed{\frac{2x - z}{x - z}}$$

4. Simplify stating excluded terms.

$$\frac{12x^3 - 8x^2}{4x^3 - 4x^2} = \frac{4x^2(3x - 2)}{4x^2(x^2 - 1)} = \boxed{\frac{3x - 2}{x^2 - 1} \quad x \neq 0, -1}$$

excluded values

5. Multiply.

$$\frac{a^2 + 2a - 15}{a^2 - 6a + 9} \cdot \frac{a^2 + 3a - 18}{a^2 + 11a + 30} = \frac{(a+5)(a-3)}{(a-3)(a-3)} \cdot \frac{(a-3)(a+6)}{(a+5)(a+6)} = \frac{1}{1} \cdot \frac{1}{1} = \boxed{1}$$

6. Divide.

$$\frac{a^2 - 4}{a^2 - 5a + 6} \div \frac{a^2 + 4a + 4}{a^2 + 9a + 14} = \frac{(a+2)(a-2)}{(a-3)(a-2)} \cdot \frac{(a+7)(a+2)}{(a+2)(a+2)} = \boxed{\frac{a+7}{a-3}}$$

7. Simplify, stating any excluded values.

$$\frac{x^2 - 5x - 6}{x^2 - 10x + 16} \div \frac{x^2 - 3x - 18}{x - 2} = \frac{(x-6)(x+1)}{(x-8)(x-2)} \cdot \frac{x-2}{(x-6)(x+3)} = \boxed{\frac{(x+1)}{(x-8)(x+3)}, \quad x \neq 6, -3, 8, 2}$$

excluded values

8. Simplify.

$$\frac{\frac{x^2-1}{5x}}{\frac{x+1}{10x}} = \frac{x^2-1}{5x} \div \frac{x+1}{10x} = \frac{(x+1)(x-1)}{5x} \cdot \frac{2(5x)}{x+1} = \boxed{(x-1)2}$$

Clifford (Geometric) Algebras William Baylis, 1999-04-23 This volume is an outgrowth of the 1995 Summer School on Theoretical Physics of the Canadian Association of Physicists CAP held in Banff Alberta in the Canadian Rockies from July 30 to August 12 1995 The chapters based on lectures given at the School are designed to be tutorial in nature and many include exercises to assist the learning process Most lecturers gave three or four fifty minute lectures aimed at relative novices in the field More emphasis is therefore placed on pedagogy and establishing comprehension than on erudition and superior scholarship Of course new and exciting results are presented in applications of Clifford algebras but in a coherent and user friendly way to the nonspecialist The subject area of the volume is Clifford algebra and its applications Through the geometric language of the Clifford algebra approach many concepts in physics are clarified united and extended in new and sometimes surprising directions In particular the approach eliminates the formal gaps that traditionally separate classical quantum and relativistic physics It thereby makes the study of physics more efficient and the research more penetrating and it suggests resolutions to a major physics problem of the twentieth century namely how to unite quantum theory and gravity The term geometric algebra was used by Clifford himself and David Hestenes has suggested its use in order to emphasize its wide applicability and because the developments by Clifford were themselves based heavily on previous work by Grassmann Hamilton Rodrigues Gauss and others

The Shape of Algebra in the Mirrors of Mathematics Gabriel Katz,Vladimir Nodelman,2012 The Shape of Algebra is the authors attempt to share their mathematical experiences with readers who have more than a passing interest in mathematics but have only a traditional exposure to elementary algebra Secondary school and college teachers and students who want to expand their horizons in the field will find a fresh presentation of familiar concepts and some unexpected results This book serves as a text for an appreciation course in modern mathematics designed for non mathematics majors or for first year students who are considering the possibility of studying mathematics or related disciplines It can also serve as a source of computer supported activities that could supplement traditional courses in algebra multivariable calculus and complex variable This book gives the reader a sense of the visual nature of mathematics Mathematical experiments with universal mapping software VisuMatica designed by Vladimir Nodel man form the very core of the book Readers are encouraged to reproduce play with and expand on these experiments Numerous problems are interspersed throughout the text to guide the reader Our treatment of standard algebra is visual and computational By introducing visual computational environments like VisuMatica our book promotes this geometric approach to algebra and makes it accessible to readers a great deal earlier The book will enable our readers to approach its content on three levels the first one which requires only some fluency with elementary algebraic manipulations the second one which also presumes familiarity with the notions of derivatives and tangent lines to plane curves and the third one which uses some basic concepts of multivariable calculus All three levels are clearly marked in the text and will allow for a smooth reading and virtual experiments regardless of the level that our readers will find comfortable

Thinking Geometrically Thomas Q. Sibley, 2015-08-14 *Thinking Geometrically* A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software

Mathematics Education Lyn D. English, Graeme S. Halford, 2012-12-06 To define better techniques of mathematics education this book combines a knowledge of cognitive science with mathematics curriculum theory and research The concept of the human reasoning process has been changed fundamentally by cognitive science in the last two decades The role of memory retrieval domain specific and domain general skills analogy and mental models is better understood now than previously The authors believe that cognitive science provides the most accurate account thus far of the actual processes that people use in mathematics and offers the best potential for genuine increases in efficiency As such they suggest that a cognitive science approach enables constructivist ideas to be analyzed and further developed in the search for greater understanding of children's mathematical learning Not simply an application of cognitive science however this book provides a new perspective on mathematics education by examining the nature of mathematical concepts and processes how and why they are taught why certain approaches appear more effective than others and how children might be assisted to become more mathematically powerful The authors use recent theories of analogy and knowledge representation combined with research on teaching practice to find ways of helping children form links and correspondences between different concepts so as to overcome

problems associated with fragmented knowledge. In so doing they have capitalized on new insights into the values and limitations of using concrete teaching aids which can be analyzed in terms of analogy theory. In addition to addressing the role of understanding the authors have analyzed skill acquisition models in terms of their implications for the development of mathematical competence. They place strong emphasis on the development of students' mathematical reasoning and problem solving skills to promote flexible use of knowledge. The book further demonstrates how children have a number of general problem solving skills at their disposal which they can apply independently to the solution of novel problems resulting in the enhancement of their mathematical knowledge.

Unleashing the Positive Power of Differences Jane A. G. Kise, 2014
Move from entrenched differences to common goals. All too often key education initiatives collapse because leaders fail to anticipate and learn from the concerns of those charged with implementation. This illuminating book shows how education leaders can bring opposing groups to common ground resulting in a solid plan built on diverse wisdom. Acclaimed education coach Jane Kise demonstrates how polarity thinking, a powerful tool for bridging differences developed by Barry Johnson of Polarity Partnerships, provides an alternative to endless debates and either/or thinking. Rather than seeing conflicting forces, the tools help us view them as equally important, even interdependent concepts, approaches or models. Readers will find ways to recognize polarities, map the positive and negative aspects and channel energy wasted on disagreement toward a greater common purpose. Tools for introducing and working with polarities. Polarity mapping to help leaders improve processes for leading change and creating buy-in. Ways to use polarity with students as a framework for higher level thinking. Jane Kise provides guidance for educators engaged in deep change and implementation of initiatives in which stakeholders have opposing perspectives. Through authentic examples of significant changes educators face today, Kise guides educators to leverage polarity thinking to promote commitment, engagement and investment. Joellen Killian, Senior Advisor, Learning Forward. The mind entrenched in the rigidity of either/or thinking dwells on the divisions and ignores the connections of both. This engaging and practical book helps our students and their teachers transcend those divisions in a journey toward enriched enlightenment and greater flexibility. Arthur L. Costa, Emeritus Professor, California State University, Sacramento.
