

Improvements in Aircraft Propulsion.

The patent was granted in 1932.

The patent showed the air passing through a single-stage axial-flow compressor, then a centrifugal compressor, before entering a number of radially-arranged combustion chambers and exhausting through a 2 stage axial-flow turbine on the same shaft as the compressor. Modern small gas turbines follow a similar layout.

Once granted, the patent was published but lapsed when Whittle could not afford the renewal fee of £5.

Key:

However he received very little encouragement from the Air Ministry or industry. After receiving support from investment bankers, Power Jets was established in 1936 and Whittle was assigned to the company to work on the design and development of his first jet engine.
