

DNA & RNA

GUIDED READING & PRACTICE WORKSHEETS

RNA

1

(1) What information is in a single strand of nucleic acid that does not appear in the double-stranded structure of nucleic acids (protein)? The genetic information in DNA is transmitted by RNA, which is a single-stranded nucleic acid. It is a polymer called the *primary structure*. Proteins are the *secondary structure* of the nucleic acid and is a polymer of repeating functions in the nucleic acid.

(2) What is RNA? RNA is composed of a long chain of nucleotides. Nucleotides are the building blocks of RNA. RNA is single-stranded. Nucleotides are composed of a sugar, a phosphate group, and a nitrogenous base. RNA can be found in the nucleus and in the cytoplasm of the cell. RNA is a polymer of repeating functions in the nucleic acid.

(3) There are three main types of RNA. List each type and its function.

1. Messenger RNA (mRNA) carries the genetic information from DNA to the nucleus for translation. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid.

2. Transfer RNA (tRNA) carries the genetic information from mRNA to the ribosome for translation. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid.

3. Ribosomal RNA (rRNA) is the site of protein synthesis and is a major component of ribosomes. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid.

4. Other RNA (e.g., small RNA) is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid. It is a polymer of repeating functions in the nucleic acid.

RNA PRACTICE

1

- What is the full name of RNA?
- What is the primary role of RNA?
- How many strands does a molecule of RNA contain?
- What are the building blocks of RNA?
- Summarize the roles of the following types of RNA.

mRNA	tRNA	rRNA

RNA

GRADES 8-12

NAME: _____
DNA
PER: _____
DATE: _____

1
DNA

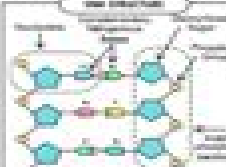

(1) **What is deoxyribonucleic acid (DNA)?** It is a nucleic acid that contains genetic information and instructions that code for traits. The structure, function, development, and characteristics of all living organisms is written in the code on DNA. (DNA is a double-stranded molecule in the shape of a double helix.)

(2) **Nucleotides are the building blocks of DNA.** Each nucleotide consists of deoxyribose sugar, a phosphate group, and a nitrogenous base. The sugar and phosphate from neighboring nucleotides bond together to form the sugar-phosphate backbone of DNA. There are four types of nitrogenous bases in DNA: adenine (A), thymine (T), cytosine (C), and guanine (G). These bases pair with each other in a specific way: A pairs with T, and C pairs with G. Neighboring bases pairs that hold the two complementary strands of the double helix together.

(3) **The sequence of base pairs contains the genetic code, which determines the traits of an organism.** This genetic code is transcribed into RNA, which is then translated into proteins. (Proteins are the building blocks of life and are responsible for a wide variety of biological processes.)

(4) **DNA is found in the nucleus of eukaryotic cells and in the cytoplasm of prokaryotic cells.** It is packaged into structures called chromosomes, which are tightly coiled strands of DNA that contain all the genetic information of an organism.

DNA STRUCTURE

Observe the diagram in the right-hand side of the following:

- 1. A nucleotide consists of deoxyribose sugar, a phosphate group, and a nitrogenous base.
- 2. A sugar-phosphate backbone runs down each side of a DNA molecule.
- 3. Bases are complementary to one another.
 - A pairs with T
 - C pairs with G

DNA PRACTICE
2

1. What is the full name of DNA?
2. What does DNA consist?
3. What does DNA code for?
4. Describe the structure of DNA.
5. What are nucleotides and what do they make up of?
6. What makes up the DNA backbone?
7. What does the sequence of base pairs determine?
8. Where is DNA found in eukaryotic cells?

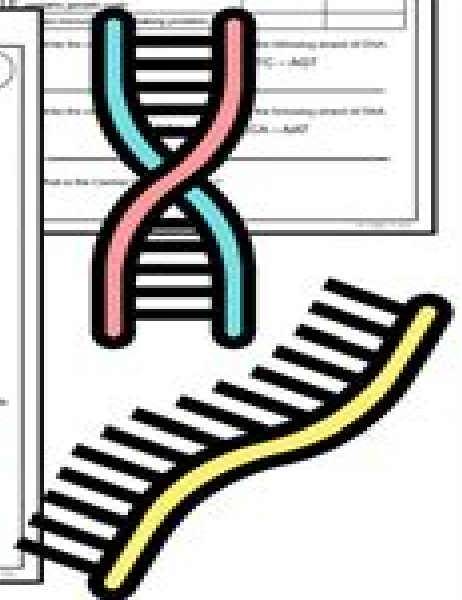

Write the correct letter of the complementary base pair for each nucleotide in DNA. (Two base pairs are shown for you.)
