

Ex 9.2, 4

If a line intersects two concentric circles (circles with the same centre) with centre O at A, B, C and D, prove that $AB = CD$ (see figure).

Given: Two concentric circles with centre O.
& a line intersects the circles at A, B, C & D

To prove: $AB = CD$

Proof: Let two circles be C_1 & C_2 and line be l

We draw OP perpendicular to line l

In circle C_1 ,

$OP \perp BC$ (As OP is perpendicular to line l)

So, OP bisects BC ,

i.e. $BP = CP$ (Perpendicular drawn from centre of a circle to a chord bisects the chord)
...(1)

In circle C_2 ,

$OP \perp AD$ (As OP is perpendicular to line l)

So, OP bisects AD ,

i.e. $AP = DP$ (Perpendicular drawn from centre of a circle to a chord bisects the chord)
...(2)

12 1praxtice A Lines That Intersects Circles:

A Brief Quadrivium Peter Ulrickson, 2023-02-24 Mathematics holds a central place in the traditional liberal arts. The four mathematical disciplines of the quadrivium—arithmetic, geometry, music, and astronomy—reveal their enduring significance in this work, which offers the first unified textbook treatment of these four subjects. Drawing on fundamental sources including Euclid, Boethius, and Ptolemy, this presentation respects the proper character of each discipline while revealing the relations among these liberal arts as well as their connections to later mathematical and scientific developments. This book makes the quadrivium newly accessible in a number of ways. First, the careful choice of material from ancient sources means that students receive a faithful integral impression of the classical quadrivium without being burdened or confused by an unwieldy mass of scattered results. Second, the terminology and symbols that are used convey the real insights of older mathematical approaches without introducing needless archaism. Finally, and perhaps most importantly, the book is filled with hundreds of exercises. Mathematics must be learned actively, and the exercises are structured to complement the text and proportioned to the powers of a learner to offer a clear path by which students make quadrivial knowledge their own. Many readers can profit from this introduction to the quadrivium. Students in high school will acquire a sense of the nature of mathematical proof and become confident in using mathematical language. College students can discover that mathematics is more than procedure while also gaining insight into an intellectual current that influenced authors they are already reading, authors such as Plato, Aristotle, Augustine, Thomas Aquinas, and Dante. All will find a practical way to grasp a body of knowledge that, if long neglected, is never out of date.
