

Sequences

A sequence is a set of numbers or algebraic terms that follow a particular pattern or rule to get from one term to the next.

Examples

2, 5, 8, 11, 14, ...

$+3$ $+3$ $+3$ $+3$

This is an **arithmetic** sequence - to get from one term to the next, you add

3, 6, 12, 24, 48

$\times 2$ $\times 2$ $\times 2$ $\times 2$

This is a **geometric** sequence - to get from one term to the next, you multiply by

This is a special sequence called the **triangular numbers**.

Puzzles, Paradoxes, and Problem Solving Marilyn A. Reba, Douglas R. Shier, 2014-12-15 A Classroom Tested Alternative Approach to Teaching Math for Liberal Arts Puzzles Paradoxes and Problem Solving An Introduction to Mathematical Thinking uses puzzles and paradoxes to introduce basic principles of mathematical thought The text is designed for students in liberal arts mathematics courses Decision making situations that progress from recreational problems to important contemporary applications develop the critical thinking skills of non science and non technical majors The logical underpinnings of this textbook were developed and refined throughout many years of classroom feedback and in response to commentary from presentations at national conferences The text s five units focus on graphs logic probability voting and cryptography The authors also cover related areas such as operations research game theory number theory combinatorics statistics and circuit design The text uses a core set of common representations strategies and algorithms to analyze diverse games puzzles and applications This unified treatment logically connects the topics with a recurring set of solution approaches Requiring no mathematical prerequisites this book helps students explore creative mathematical thinking and enhance their own critical thinking skills Students will acquire quantitative literacy and appreciation of mathematics through the text s unified approach and wide range of interesting applications

The Purpose of Change is Problem Solving Janos Korn, 2016-02-28 Any part of the world can be viewed and modelled in terms of its chosen qualitative and or quantitative properties OR its structure The former approach has been used by nearly the whole of human intellectual

endeavor i.e. conventional science of physics the arts etc Development of the latter or the systemic view is the subject matter of the current work The Purpose of Change is Problem Solving suggests that the structural view is empirical pervasive throughout experience and as such results in a single domain as opposed to conventional science which consists of many domains like mechanics electricity etc Thus a unique approach is required which is based on general principles of systems translated into operational form by the symbolism of processed natural language called linguistic modelling of scenarios which can carry mathematics and uncertainties To model scenarios with complex structure a description or story in natural language is expressed in terms of homogenous language of one and two place sentences the elementary constituents of which complex structures can be constructed like a variety of buildings from bricks To correspond to the single domain based on the logic of causation a single scheme of Management producers Product User consumer is proposed which is immediately applicable to structuring scenarios and guides their detailed linguistic modelling or design The approach subject to debate can have significant impact on society and education especially that of engineering which lacks a comprehensive theory of structure of problematic scenarios
