

GENE REGULATION

- ▶ Gene regulation is the process of turning genes on and off
- ▶ Regulation of gene expression is the control of the amount and timing of appearance of the functional product of a gene.
- ▶ Control of expression is vital to allow a cell to produce the gene products it needs when it needs them; in turn, this gives cells the flexibility to adapt to a variable environment, external signals, damage to the cell, and other stimuli.
- ▶ More generally, gene regulation gives the cell control over all structure and function, and is the basis for cellular differentiation, morphogenesis and the versatility and adaptability of any organism.
- ▶ Gene regulation ensures that the appropriate genes are expressed at the proper times.
- ▶ Gene regulation can also help an organism respond to its environment.
- ▶ Gene regulation is accomplished by a variety of mechanisms including chemically modifying genes and using regulatory proteins to turn genes on or off.

13 4 Gene Regulation And Expression:

Hormones and the Heart in Health and Disease Leonard Share, 1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise *Hormones and the Heart in Health and Disease* we interpret endocrinology broadly and consider traditional hormones as well as autocoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

Class 3.4-6 Hydrolases, Lyases, Isomerases, Ligases Dietmar Schomburg, Ida Schomburg, Antje Chang, 2013-04-11 Springer Handbook of Enzymes provides data on enzymes sufficiently well characterized It offers concise and complete descriptions of some 5 000 enzymes and their application areas Data sheets are arranged in their EC Number sequence and the volumes themselves are arranged according to enzyme classes This new second edition reflects considerable progress in enzymology many enzymes are newly classified or reclassified Each entry is correlated with references and one or more source organisms New datafields are created application and engineering for the properties of enzymes where the sequence has been changed The total amount of material contained in the Handbook has more than doubled so that the complete second edition consists of 39 volumes as well as a Synonym Index In addition starting in 2009 all newly classified enzymes are treated in Supplement Volumes Springer Handbook of Enzymes is an ideal source of information for researchers in biochemistry biotechnology organic and analytical chemistry and food sciences as well as for medicinal applications
